

# Pressure and flow control system

Type SYDFE1-2X, SYDFFEE-2X, SYDFEC-2X,  
SYDFEn-2X, SYDFED-2X

**RE 30030**

Edition: 2015-09

Replaces: 2014-12

H6707\_d

SYDFE1-2X..., VT 5041

H7111\_d

SYDFEC-2X..

SYDFED-2X...

- ▶ With axial piston variable displacement pump A10VSO.../31
- ▶ Size 18 ... 140
- ▶ Component series 2X
- ▶ Maximum operating pressure of 280 bar

## Features

A SYDFE.-2X control system is used for the electro-hydraulic control of swivel angle, pressure and power (partially optional, see pages 4 and 9) of an axial piston variable displacement pump.

The control system consists of the following components:

- ▶ Axial piston variable displacement pump A10VSO.../31
- ▶ VT-DFP-2X or VT-DFPD-1X proportional valve as pilot valve including inductive position transducer for valve position sensing. With versions SYDFFEE, SYDFEC, SYDFEn and SYDFED, the pilot valve contains electronics for system control.
- ▶ For SYDFE1: External control electronics VT 5041-3X for realizing all electric functions necessary for the SYDFE1-2X (separate order)
- ▶ Position transducer for sensing the swivel angle
- ▶ Pressure transducer with suitable signal level and dynamics (optionally HM 20, otherwise separate order)
- ▶ Preload valve with integrated pressure relief function SYDZ (optional)

## Ordering code: Order examples

### Order example for single pump:

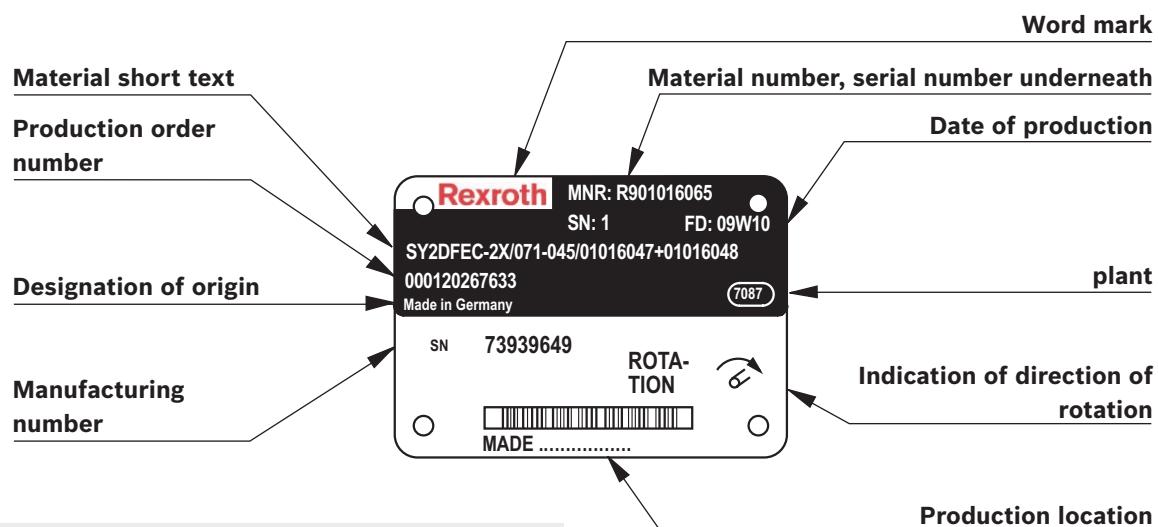

SYDFEE-2X/100R-PSA12N00-0479-A0A0VXX

### Order example for pump combination:

Both material numbers and/or type designations are to be connected by means of “+”.

Main pump (1st pump)	+ Attachment pump (2nd pump)
SY2DFEE-2X/100-100/00709780	+ 00709780
SY2DFEE-2X/100-100/ <u>SYDFEE-2X/100R-PSA12KD5-0000-A0A0CXX</u>	+ <u>SYDFEE-2X/100R-PSA12KD5-0000-A0A0CXX</u>
Double pump	
Size of the main pump	
Size of the attachment pump or pump abbreviation if attachment pump is different from SYDDE (e.g. PGF)	
Material number without “R9” for the main pump or type designation if material number is not known	
Pump combination, mounted with accessories	
Material number without “R9” for the attachment pump or type designation if material number is not known	

### Example of a name plate for a pump combination SY2DFEC

#### ☞ Notices:

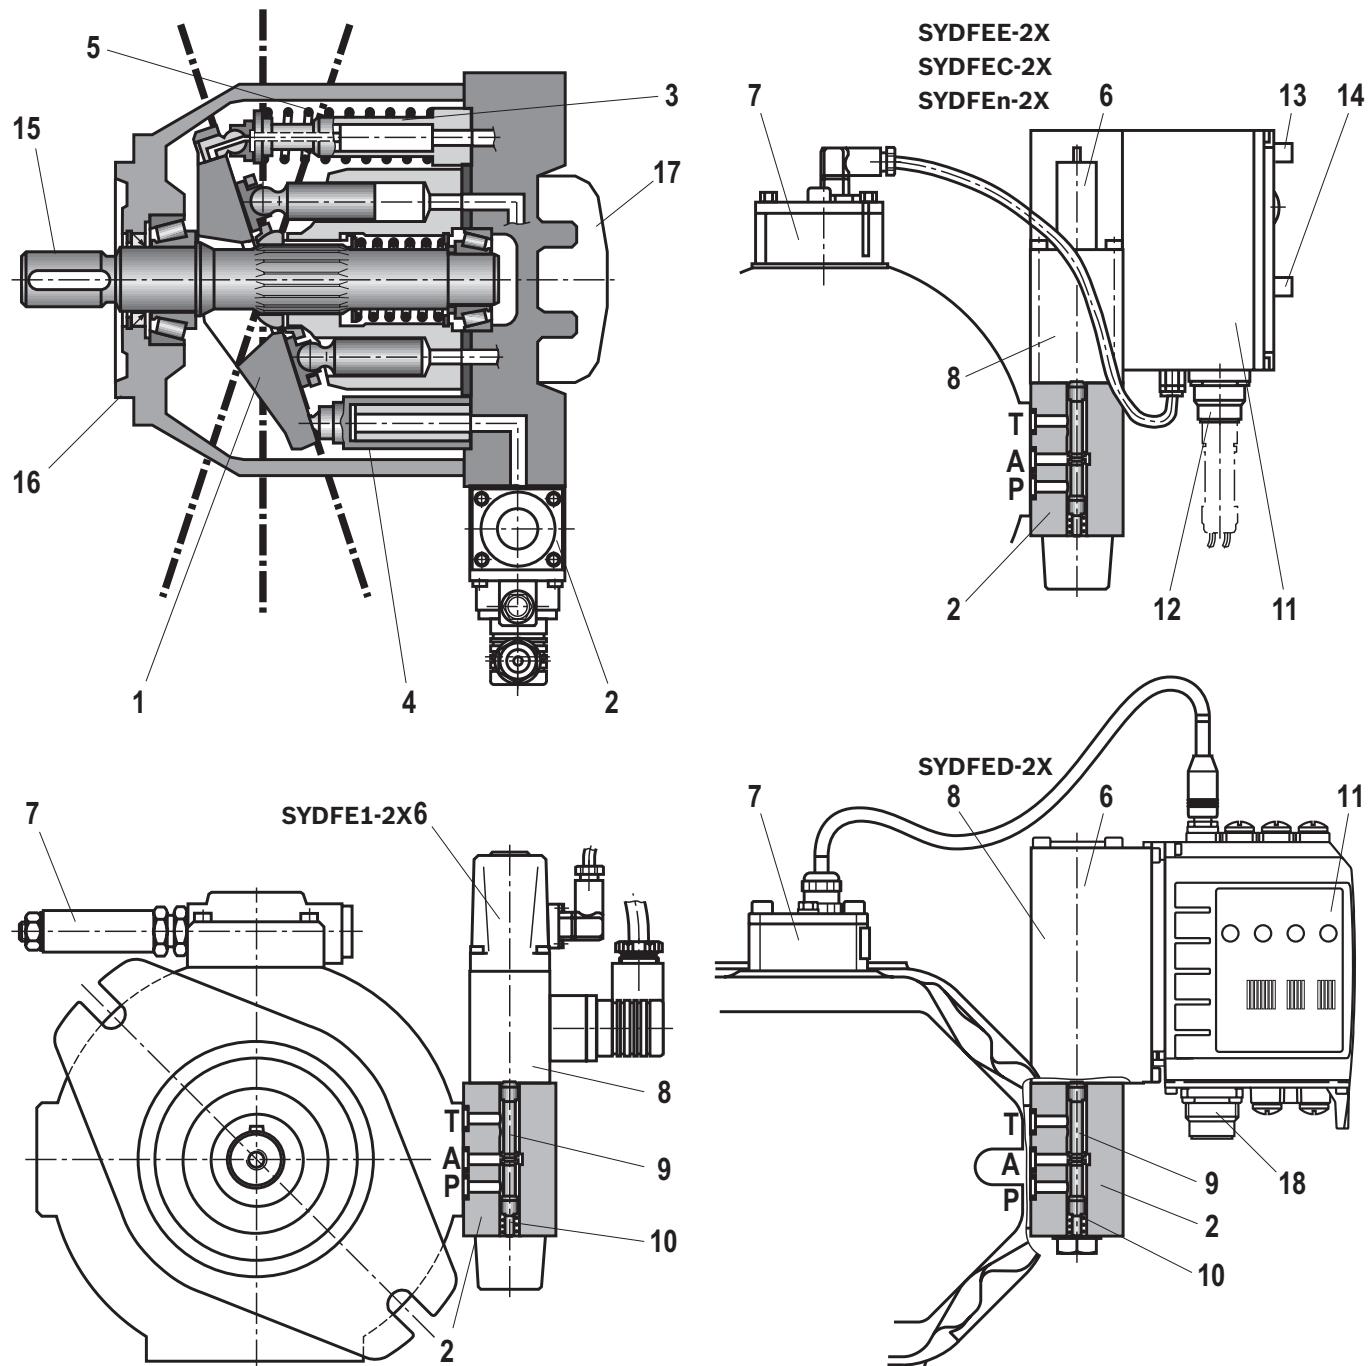

For inquiries regarding the control system, material number, fabrication order number, serial number, and date of manufacture are necessary.

**Section**

- 1 Swash plate
- 2 Pilot valve
- 3 Counter piston
- 4 Actuating piston
- 5 Spring
- 6 Inductive position transducer for valve position
- 7 Swivel angle/position sensor
- 8 Proportional solenoid
- 9 Valve spool
- 10 Spring
- 11 Integrated electronics

- 12 Connector X1
- 13 Connector X2 for connecting pressure transducer HM 20 cable version (for SYDFFEE only with actual pressure value input F, for SYDFEC/SYDFEn always available)
- 14 Mating connector X3 for connecting the CAN bus (only available with SYDFEC/SYDFEn)
- 15 Drive shaft
- 16 Connection flange
- 17 Subplate, optionally with through-drive
- 18 Connector XH4

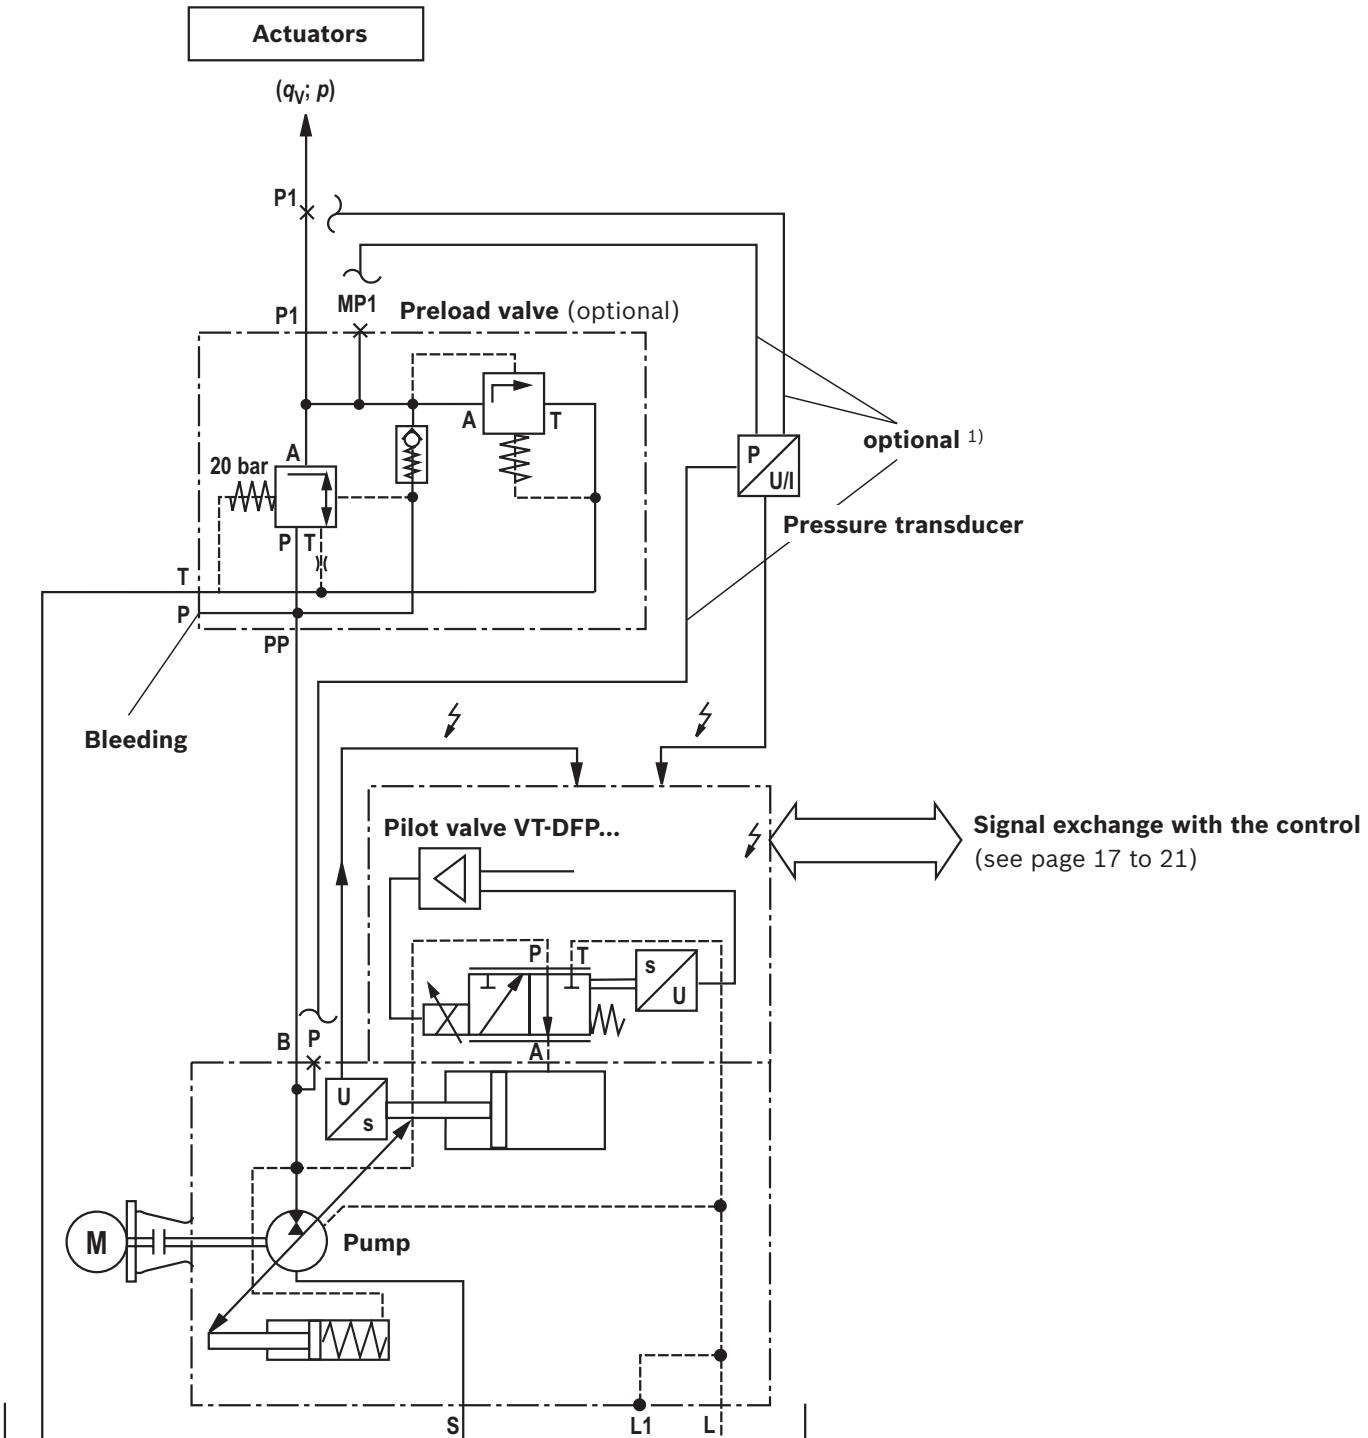

## Schematic diagram: SYDFE1-2X, actuating system supplied internally

<sup>1)</sup> Separate order

<sup>2)</sup> Optional

**Schematic diagram: SYDFEE-2X, SYDFEC-2X, SYDFEn-2X, SYDFED-2X,  
actuating system supplied internally**

<sup>1)</sup> When using the pressure transducer HM 20 cable version:

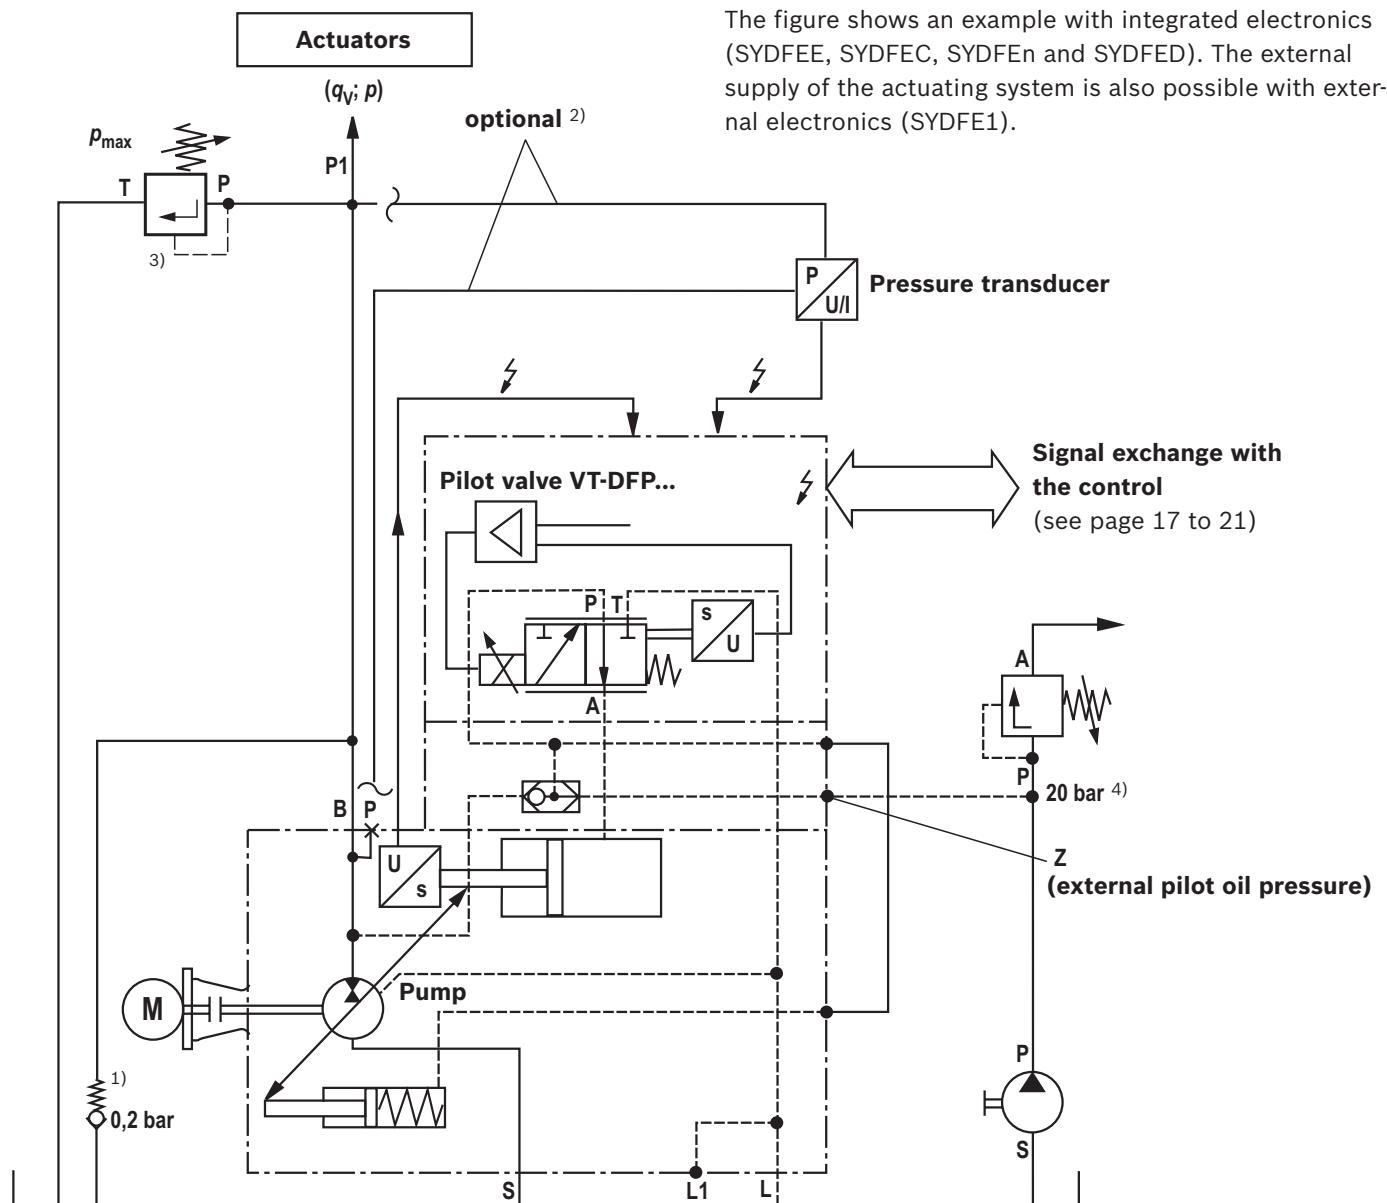

Installation in P (pump) or MP1 (preload valve) in connection with electronics version "Actual pressure value input F".

When using an external pressure transducer:

Installation in the P1 line (preferably close to the actuator) and electrical connection via central connector.

When using a preload valve, the pressure transducer is to be connected to P1 or MP1.

## Schematic diagram: SYDFE...-2X, actuating system supplied externally

1) The use of an anti-cavitation valve (check valve with 0.2 bar spring) is essential in order to prevent dry-running in case of an error.

3) Maximum pressure limitation must be provided by the customer!

4) Observe the upper limit for the external pilot oil pressure! (see operating instructions), recommendation: 20 bar absolute.

Pressure transducer	Mounting options	Comment
HM 20-2X/315-F-C13-0,5 (cable version)	P	Only in connection with actual pressure value input "F"
HM 20-2X/...-K35 (connector version)	P1	Preferably close to the actuator

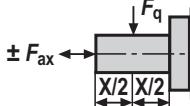

### Important notes on external supply:

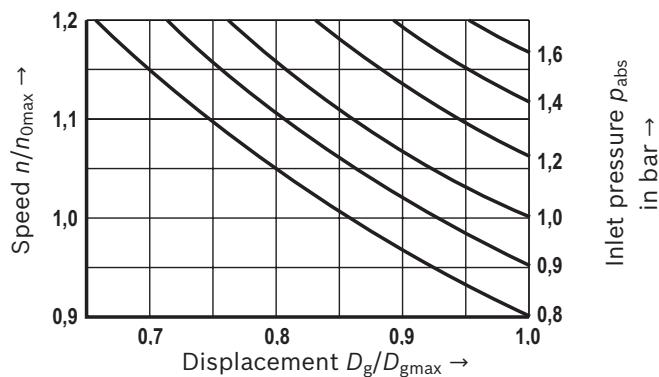

- In the case of an actuating system with external supply, the pump will - in case of voltage failure - not switch to zero stroke but to the negative stop (displacement of 100% flow from the system to the tank).
- With an active fault message, it is imperative that the machine control reacts (e.g. switching off the drive motor of the pump, interrupting the external supply of the actuating system).

- The command values for pressure and flow must always be greater than zero ( $p_{command} \geq 3$  bar,  $a_{command} \geq 5\%$ ), as due to drift or tolerances, there is no exact "zero" pressure or "zero" swivel angle. Under unfavorable conditions, smaller command value provisions can lead to cavitation.
- The actual pressure value must not be less than 10 bar for more than 10 minutes (lubrication).

**Technical data**

(For applications outside these parameters, please consult us!)

<sup>1)</sup> Outputs can be parameterized for SYDFEC, SYDFEn and SYDFED, for as-supplied condition, see 18 ... 21.

<sup>2)</sup> With SYDFED, supply voltage is used directly for sensor connections X2M1, X2M2 and X8M (no internal voltage limitation)

 **Note:**

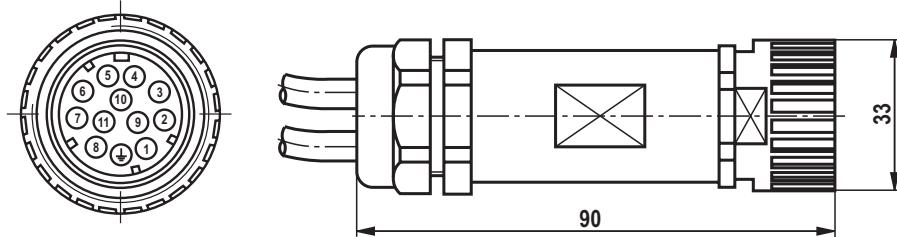

For information on the environment simulation testing for the areas EMC (electro-magnetic compatibility), climate and mechanical load, see data sheet 30030-U.

## Electrical connection: SYDFFEE...2X

The electrical connection of the SYDFE1 control system is described in data sheet 30242.

### X1: Central connection

Mating connector according to EN 175201-804 (12-pin), ordering code see section Accessories on page 9.

### Allocation of connector or mating connector and cable set

Pin	Signal	Description	Signal direction	Type of signal	Allocation in the cable set (accessories)
1	+U <sub>B</sub>	Voltage supply	IN	24 V DC	1
2	0 V = L0	Reference potential for the voltage supply	–	–	2
PE	Earth	Ground connection for the electronics	–	–	green/yellow
3	Fault	Signals failures, e.g. cable break command / actual values, controller monitoring (logic 0 = error)	OUT	logic 24 V	white
4	M0	Reference potential for analog signals	–	–	Yellow
5	a <sub>command</sub>	Swivel angle command value	IN	analog ± 10 V	Green
6	a <sub>actual</sub>	Actual swivel angle value, normalized	OUT	analog ± 10 V	violet
7	p <sub>command</sub>	Pressure command value	IN	analog 0 ... 10 V	pink
8	p <sub>actual</sub>	Actual pressure value, normalized	OUT	analog 0 ... 10 V <sup>1)</sup>	Red
9		Function depends on electronics type and additional function, see below	–	–	brown
10	Pressure actual value H	Actual pressure value input: The signal level depends on feature 14 of the ordering codes	IN	Analog	black
11	Pressure actual value L	Reserved with type "F" (0.5 ... 5 V)	–	Analog	blue
n.c.			–	–	gray

### Functions at pin 9

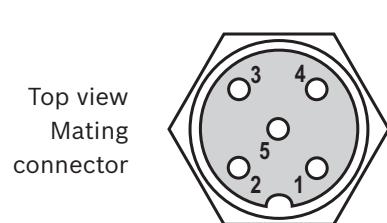

Pin	Additional function	Function depends on feature 12 of the ordering codes (see page 4)	Signal direction	Type of signal
9	-..A...	Switching to different oil volume adjustment (switch T <sub>D</sub> )	IN	logic 24 V
	-..B...	Power limitation active	OUT	logic 24 V
	-..C...	Command value of power limitation	IN	analog 0 ... 10 V
	-..D...	Switch off pressure controller	IN	logic 24 V

<sup>1)</sup> When using a pressure transducer with raised zero point (e.g. 4 ... 20 mA), a voltage of -1 ... -2.5 V will be output in the event of a cable break.

### X2: Connection pressure transducer HM 20

HM 20-2X/315-F-C13-0,5 (cable version) (mating connector M12)

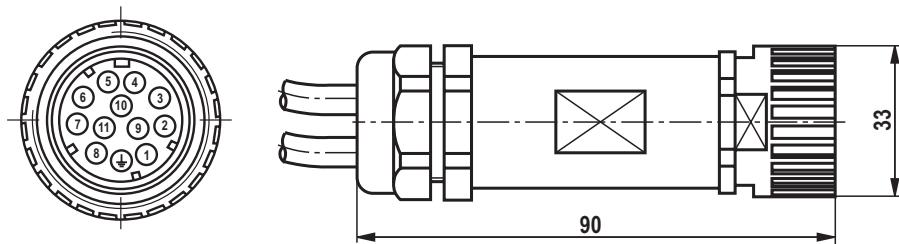

Pin	Signal HM 20	Pin	–
1	OUT, +U <sub>B</sub>	2	n.c.
3	Reference L0	–	–
4	IN, analog, 0.5 ... 5 VDC	5	n.c.

## Electrical connection: SYDFEC...2X

### X1: Central connection

Mating connector according to EN 175201-804 (12-pin), ordering code see section Accessories on page 9.

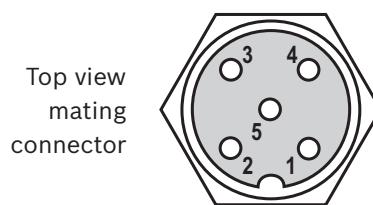

### Allocation of connector or mating connector and cable set

Pin	Signal	Description	Signal direction	Type of signal	Allocation in the cable set (accessories)
1	$+ U_B$	Voltage supply	IN	24 V DC	1
2	$0 \text{ V} = L_0$	Reference potential for the voltage supply	-		2
PE	Earth	Ground connection for the electronics	-		green/ yellow
3	Fault	Signals failures, e.g. cable break command / actual values, controller monitoring (logic 0 = error)	OUT	logic 24 V	white
4	M0	Reference potential for analog signals	-		Yellow
5	AI2	Analog input AI2 Factory setting: Swivel angle command value	IN	analog $\pm 10 \text{ V}$	Green
6	$U_{\text{OUT}2}$	Analog output Factory setting: Actual swivel angle value, normalized	OUT	analog $\pm 10 \text{ V}$	violet
7	AI1	Analog input AI1 Factory setting: Pressure command value	IN	analog $0 \dots 10 \text{ V}$	pink
8	$U_{\text{OUT}1}$	Analog output Factory setting: Actual pressure value, normalized	OUT	analog $\pm 10 \text{ V}$	Red
9	DI1	Digital input DI1	IN	logic 24 V	brown
10	Pressure actual value H	Actual pressure value input: Signal level depends on feature 14 of the ordering code	IN	Analog	black
11	Pressure actual value L		-	Analog	blue
n.c.					gray

### X2: Connection pressure transducer HM 20

HM 20-2X/315-F-C13-0,5 (cable version) and serial interface RS232 (mating connector M12)

Pin	Signal HM 20	Pin	Signal RS232
1	OUT, $+U_B$	2	RxD
3	Reference L0		
4	IN, analog, $0.5 \dots 5 \text{ V DC}$	5	TxD

### X3: Connection CAN bus and digital input 2 (DI2) (connector M12)

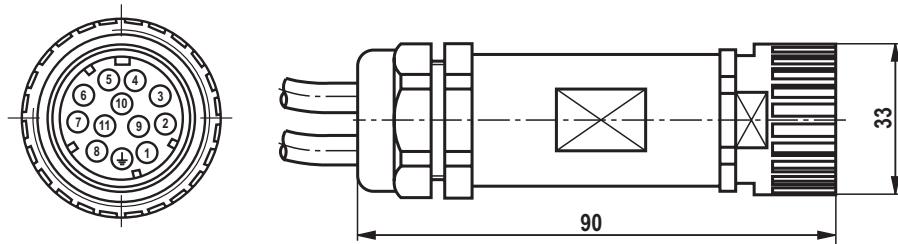

Pin	Signal input	Pin	Signal CAN
1	n.c.	3	CAN GND
2	IN, digital IN2 (DI2)	4	CAN-HIGH
		5	CAN-LOW

## Electrical connection: SYDFEn...2X

### X1: Central connection

Mating connector according to EN 175201-804 (12-pin), ordering code see section Accessories on page 9.

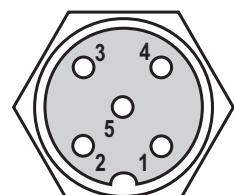

### Allocation of connector or mating connector and cable set

Pin	Signal	Description	Signal direction	Type of signal	Allocation in the cable set (accessories)
1	+ $U_B$	Voltage supply	IN	24 V DC	1
2	0 V = L0	Reference potential for the voltage supply	-		2
PE	Earth	Ground connection for the electronics	-		green/ yellow
3	Fault	Signals failures, e.g. cable break command / actual values, controller monitoring (logic 0 = error)	OUT	logic 24 V	white
4	M0	Reference potential for analog signals	-		Yellow
5	AI2	Analog input AI2 Factory setting: Swivel angle command value	IN	analog $\pm 10$ V	Green
6	$U_{OUT2}$	Analog output Factory setting: Actual swivel angle value, normalized	OUT	analog $\pm 10$ V	violet
7	AI1	Analog input AI1 Factory setting: Pressure command value	IN	analog 0 ... 10 V	pink
8	$U_{OUT1}$	Analog output Factory setting: Speed command value	OUT	analog $\pm 10$ V	Red
9	DI1	Digital input DI1 Depending on additional function (feature 12 of the ordering code): ► Teach-In version: Synchronization bit DI1 ► Real-time version: Activate real-time operation, S1	IN	logic 24 V	brown
10	Pressure actual value H	Actual pressure value input: Signal level depends on feature 14 in the ordering code.	IN	Analog	black
11	Pressure actual value L		-	Analog	blue
n.c.					gray

### X2: Serial interface RS232 and a switchable digital input/pressure transducer input for HM 20

HM 20-2X/315-F-C13-0,5 (cable version) (mating connector M12)

Pin	Signal input	Pin	Signal RS232
1	OUT, + $U_B$	2	RxD
3	Reference L0		
4	Analog input 0.5 ... 5 V for HM 20 or Digital input 0 V low, 10 V high <sup>1)</sup> Depending on additional function (feature 12 of the ordering code), factory setting: ► Teach-In version: Digital input "Variable-speed operation on, S1" ► Real-time version: Input as analog input for pressure transducer HM 20	5	TxD

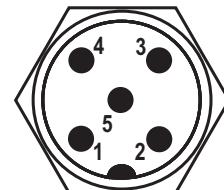

Top view  
mating  
connector

<sup>1)</sup> For valves with date of manufacture up to and including 2013 max. 12 V. For valves with production date 2014 max.  $U_B$ .

## Electrical connection: SYDFEn...2X

### X3: CAN bus and digital input 2 (connector M12)

Pin	Signal input	Pin	Signal CAN
1	n.c.	3	CAN GND
2	IN, digital IN2 (DI2) Depending on additional function (feature 12 of the ordering code), factory settings: ► Teach-In version: Start Teach-In, S2 ► Real-time version: Manual speed provision active, speed is applied according to the real-time operation status and the setting of the R parameters.	4	CAN-HIGH
		5	CAN-LOW

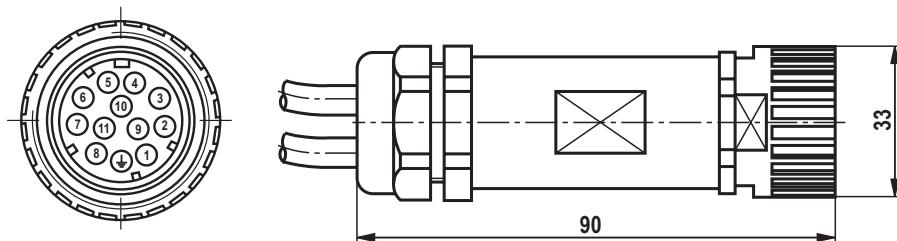

Top view connector

## Electrical connection: SYDFED....2X

### XH4: Central connection

Mating connector according to EN 175201-804 (12-pin), ordering code see section Accessories on page 9.

### Allocation of connector or mating connector and cable set

Pin	Signal	Description	Signal direction	Type of signal	Allocation in the cable set (accessories)
1	+ U <sub>B</sub>	Voltage supply	IN	24 V DC	1
2	0 V = L0	Reference potential for the voltage supply	-		2
PE	Earth	Ground connection for the electronics	-		green/yellow
3	DO	Switching output 24 V max. 1.5 A Factory setting: Error signal	OUT	logic 24 V	white
4	M0	Reference potential for analog signals	-		Yellow
5	AI2	Analog input 2 (or digital input, configuration via software)	IN	analog ± 10 V or 0 ... 20 mA (digital 24 V)	Green
6	AO2	Analog output 2 Factory setting: Actual swivel angle value, normalized	OUT	analog ± 10 V or 0 ... 20 mA	violet
7	AI1	Analog input 1 (or digital input, configuration via software)	IN	analog ± 10 V or 0 ... 20 mA (digital 24 V)	pink
8	AO1	Analog output 1 Factory setting: Actual pressure value, normalized	OUT	analog ± 10 V or 0 ... 20 mA	Red
9	DI	Digital input (use freely configurable)	IN	logic 24 V	brown
10	Actual pressure value H	Actual pressure value input (analog input 8): Signal level depending on the parameter settings. Factory setting depends on feature 14 of the ordering code	IN	analog 0 ... 10 V, 0 ... 20 mA (freely configurable)	black
11	Actual pressure value L	0 ... 10 V (V) or deactivated (F)	-	Analog	blue
n.c.					gray

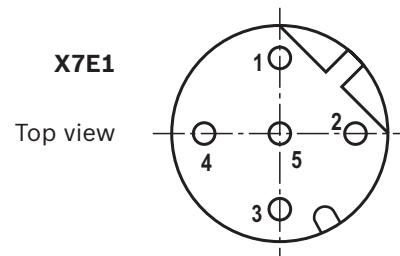

Supply line  
3 x 1.0 mm<sup>2</sup>

Supply line  
10 x 0.14 mm<sup>2</sup>  
shielded (one end of the shield must be connected to the control!)

## Electrical connection: SYDFED....2X

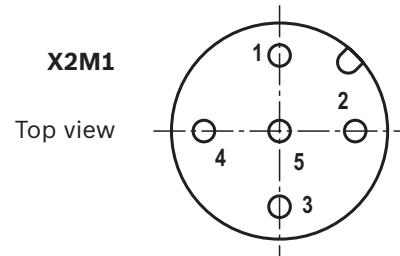

### X7E1 and X7E2: Connector assignment for Ethernet interface (coding D), M12, 4-pin, socket

Pin	Assignment
1	TxD +
2	RxD +
3	TxD -
4	RxD -
5	not used

### X2M1 and X2M2: Analog configurable sensor interface (coding A), M12, 5-pin, socket

Pin	Assignment
1	+ 24 V voltage output (sensor supply) <sup>1)</sup>
2	Sensor signal input current (4 ... 20 mA) <sup>2)</sup>
3	GND
4	Sensor signal input voltage (0 ... 10 V) <sup>2)</sup>
5	Negative differential amplifier input to pin 4 (optional)

<sup>1)</sup> Maximum load capacity 50 mA, voltage output same as voltage supply connected to input XH4.

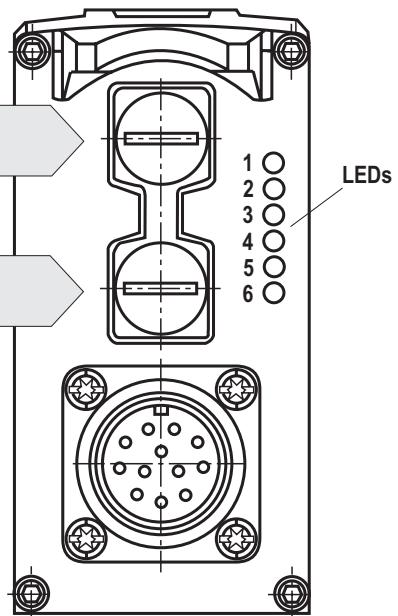

<sup>2)</sup> Only one signal input per interface, configurable

### X2N: Reserved

### X8A: Swivel angle actual value input (coding A), M12, 5-pin, socket M12

## LED display SYDFED-2X

LED	Interface	Sercos	EtherNET/IP	EtherCAT	PROFINET
1	X7E1	Activity	Activity	Not used	Activity
2		Link	Link	Link/activity	Link
3	Electronics module	S	Network status	Network status	Network status
4		Module status	Module status	Module status	Module status
5	X7E2	Activity	Activity	Not used	Activity
6		Link	Link	Link/activity	Link

### Displays of the status LEDs

Module status LED (LED 4)	Status display
From	no voltage supply
Green-red, flashing	Self-test
Green, flashing	Drive ready
Green	In control mode
Red, flashing	Warning
Red	Error

Network status LED (LED 3)	Status display
From	no voltage supply
Green	Operation

#### ☞ Notices:

- ▶ LEDs 1, 2, 5 and 6 relate to interfaces "X7E1" and "X7E2"
  - Link: Cable plugged in, connection established (permanently lit)
  - Activity: Data sent/received (flashing)
- ▶ Module status LEDs 3 and 4 relate to the electronics module
- ▶ For a detailed description of the diagnosis LEDs, please refer to the functional description Rexroth HydraulicDrive HDS.

## Closed-loop control quality

### Notices:

- The specified values are only valid when using the system-related components specified in this data sheet.
- At pressures < 20 bar, higher tolerances have to be anticipated due to lower actuating forces.

	Swivel angle control	Pressure control <sup>1)</sup>
Linearity tolerance	≤ 1.0%	≤ 1.5% (≤ 1.0% <sup>2)</sup> )
Temperature error	≤ 0.5% / 10 K	≤ 0.5% / 10 K
Hysteresis	≤ 0.2%	≤ 0.2%
Repetition accuracy	≤ 0.2%	≤ 0.2%

<sup>1)</sup> Without considering the pump pulsation

<sup>2)</sup> With SYDFEC, SYDFEn and SYDFED, using the integrated calibration function

## Transition function with pressure command value step with spool design “A”

The specified curve shapes and control times refer to a drive speed of 1500 rpm and are only reached with an optimization of the pressure controller.

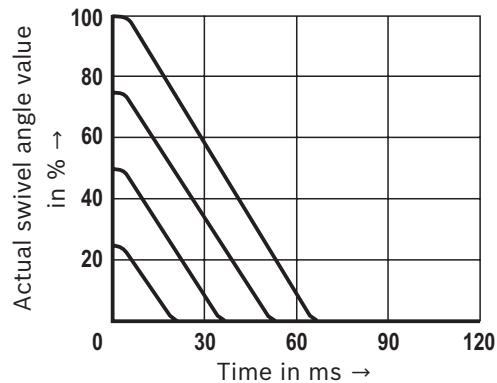

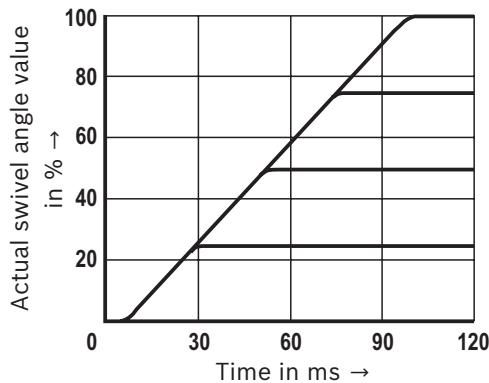

T 95% in ms with a connected hydraulic fluid volume (lines and actuators)

Hydraulic fluid volume in l	T <sub>95%</sub> in ms
< 5	150
5 ... 10	200
15 ... 25	250

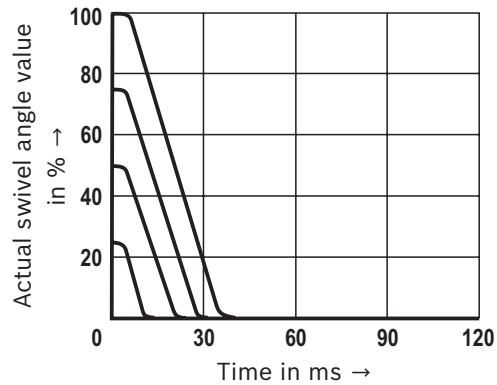

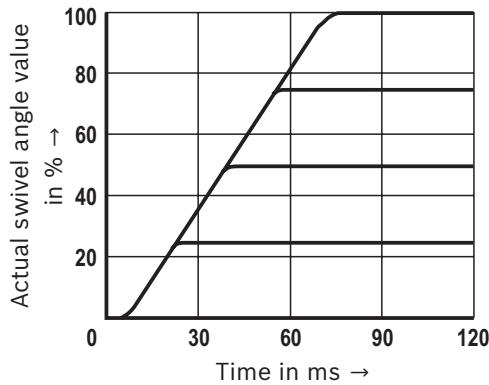

For pressures up to 40 bar, the values of the response times are larger.

### Transition function with swivel angle command value step with spool design "A"

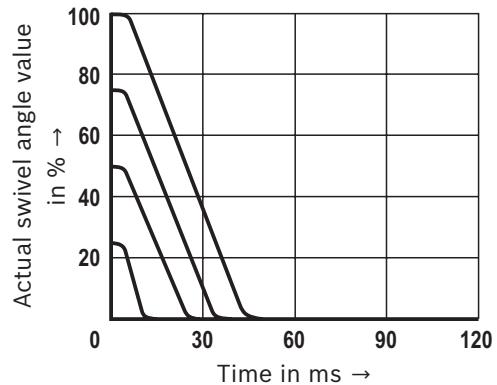

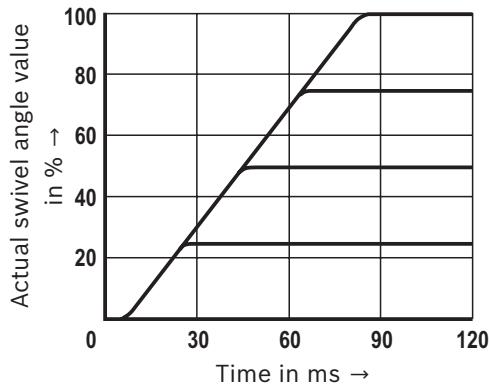

**Size 18, 28, 45, 71 p = 20 bar**

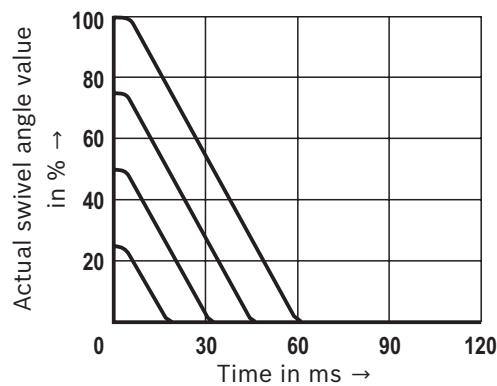

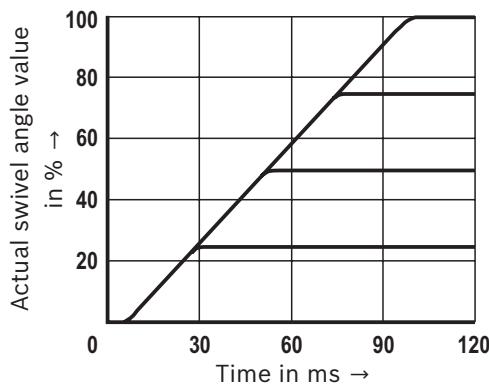

**Size 18, 28, 45, 71 p = 50 bar**

**Size 100 p = 50 bar**

**Size 140 p = 50 bar**

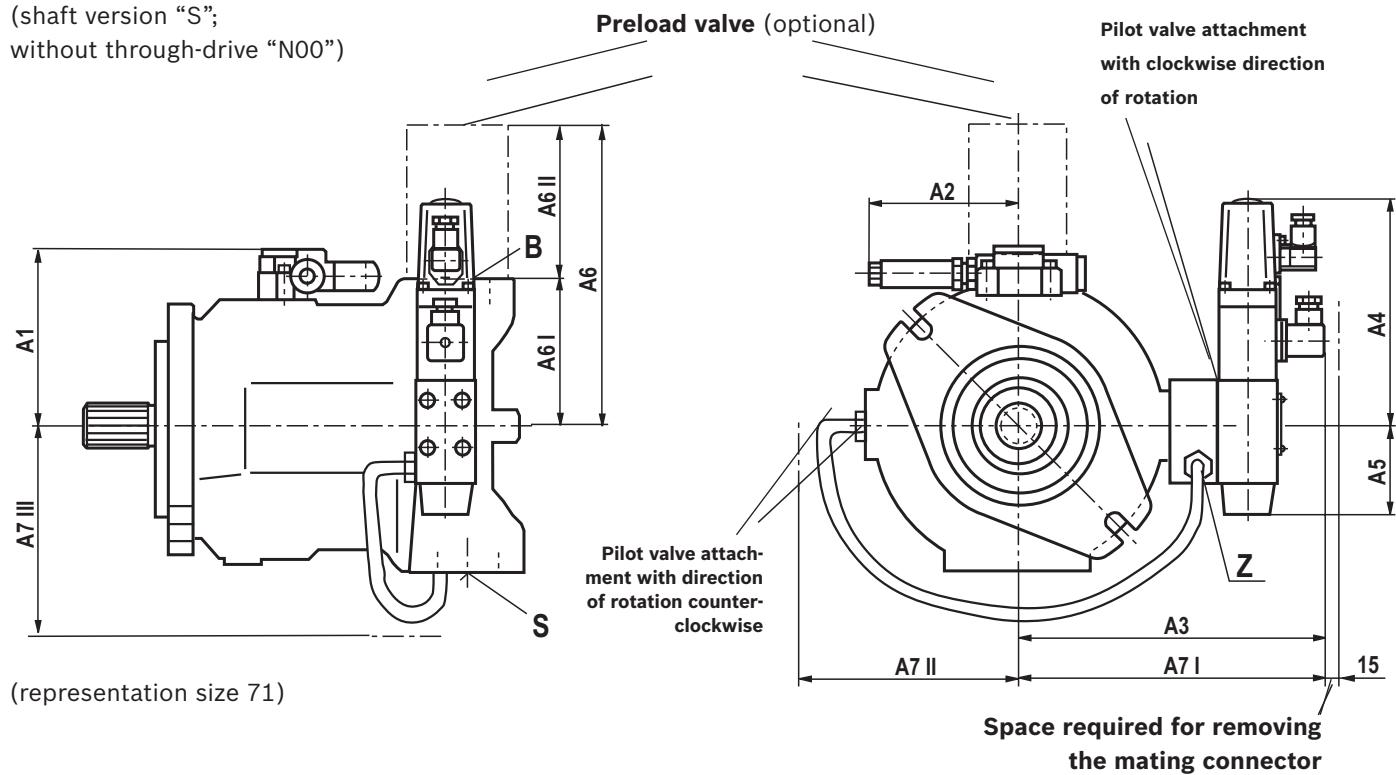

## Dimensions: SYDFE1

(dimensions in mm)

The unit dimensions of the base pump (axial piston variable displacement pump A10VSO.../31) are contained in data sheet 92711.

## Dimensions: Ports

(dimensions in mm)

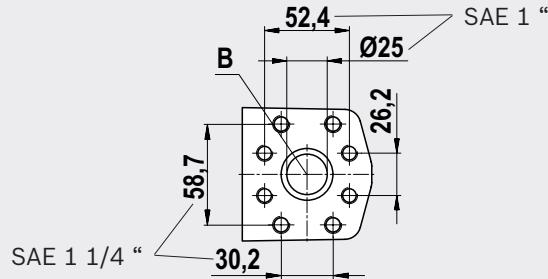

Size	18	28	45	71	100	140
B: Service line (SAE J518 <sup>1)</sup> )						
Size	3/4"	3/4"	1"	1"	1 1/4"	1 1/4"
Fixing thread (DIN 13)		M10 x 1,5; 17 deep			M14 x 2; 19 deep	
Peak press. <sup>2)</sup>	bar			350		
S: Inlet line (SAE J518 <sup>1)</sup> )						
Größe	1"	1 1/4"	1 1/2"	2"	2 1/2"	2 1/2"
Fixing thread (DIN 13)		M10 x 1,5; 17 deep		M12 x 1,75; 20 deep		M12 x 1,75; 17 deep
Peak press. <sup>2)</sup>	bar			10		

<sup>1)</sup> Dimensions according to SAE J518 only, metric mounting thread deviating from the standard.

<sup>2)</sup> Application dependent pressure spikes can occur. Please consider this when selecting measuring equipment or fittings  
Specified pressures are in bar absolute.

### Notes on Size 71:

- At pressure port „B“ there are two SAE flanged ports available, each offset by 90°. SAE 1 1/4", standard pressure range, 3000 psi, for pressures up to 250 bar. SAE 1", standard pressure range, 5000 psi, for pressures up to 350 bar.
- For operating pressures above 250 bar the standard-pressure SAE 1 " port must be used.

## Hubs for through-drives

Hubs for combining single pumps or SYDFE with other pumps. Please note that the attachment pump has a splined shaft SAE J744 with the specified diameter.

The following conditions apply to the attachment pumps listed in the table:

- SYDFE and A10VSO with shaft S or R
- Internal gear pump PGH with shaft R, flange U2, see data sheet 10223
- Internal gear pump PGF3 with shaft J, flange U2, see data sheet 10213
- External gear pump AZPF with shaft R, front cover R, see data sheet 10089

Also observe that the through-drive of the main pump and the flange of the attachment pump (see ordering code page 2) are identical. Check in the current data sheet of the gear pump whether the shaft ends have the specified dimensions.

Main pump SYDFE or A10VSO...						Attachment pump	Pump type (examples)

## Project planning information

- ▶ Always shield command value lines and actual value cables.
- ▶ The distance to aerial lines or radios must be at least 1 meter!
- ▶ Do not lay signal lines close to power lines.
- ▶ For supplementary notices on the SYDFE control system, see the operating instructions (see section “More information about this control system” on this page).

## Further information about this control system
