

Pneumatic Logic & Controls

Catalog PCC-4/USA

Parker Hannifin Corporation

A global, Fortune 300 company with sales of \$8 billion and over 400,000 customers in 46 countries, Parker Hannifin is the world's leading supplier of motion control components and system solutions serving the industrial, mobile, and aerospace markets.

Excellence is imprinted on our corporate DNA. We are the only manufacturer offering customers a choice of hydraulic, pneumatic, electromechanical, or computer motion control.

Total Systems Solutions

Parker's team of highly qualified applications engineers, product development engineers, and system specialists can turn pneumatic, structural extrusion, and electromechanical products into an integrated system solution. And our Selectable Levels of Integration™ program provides the components, subsystems, and controlled motion systems for the level of integration you choose.

Parker consistently raises the bar for its manufacturing plants and distributors, measuring its delivery to customer request date.

1st in Delivery, Field Sales and Distribution

Parker boasts the industry's largest global distribution network, with more than 8,600 distributors worldwide. With factories located strategically on five continents, we can maintain matchless on-time delivery rates.

Expect industry's fastest response and delivery by customer request date when you contact Parker or one of its distributors. Plus, Parker's army of pneumatic engineers works hand-in-hand with you and your local distributors during the design process to ensure the best products, services, and application performance.

Parker Pneumatic Distribution offers the next level in premier customer service. Each location has significant on-hand inventory to keep your down time to a minimum. And many distributors have inhouse design capability to support your system and subsystem requirements.

Parker world headquarters in Cleveland

Training

Parker's best-in-class technology training includes hands-on classes, Web-based training, and comprehensive texts for employees, distributors, and customers. Parker also provides

computer based training, PowerPoint presentations, exams, drafting and simulation software, and trainer stands.

Five-Year Warranty

Our standard 18-month warranty on pneumatic products is extended to 60 months when used with a properly installed and maintained Parker air preparation system.

www.parker.com/pneumatics

Industry's most comprehensive Web site is your single source for:

- Product information
- Downloadable catalogs
- 3D design files
- Training materials
- Product configuration software
- RFQ capabilities

24/7 Emergency Breakdown Referrals

The Parker product information center is available any time of the day or night at 1-800-C-Parker. Our operators will connect you with on-call representatives who will identify replacement parts or services for all motion technologies. Talk to a real person!

! WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application including consequences of any failure, and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Offer of Sale

The items described in this document are hereby offered for sale by Parker Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the provisions stated on the separate page of this document entitled "Offer of Sale".

When to Choose Pneumatic Controls

Automated machines often mix pneumatic actuation (cylinders, air motors, blowers, suction cups, etc.) and electrical actuation (motors, heat resistors, electro-magnets, etc.).

In choosing control hardware, the designer should seek to maximize overall system uniformity.

Therefore:

- Pneumatic controls should be used when the majority of actuators are pneumatic.
- Electrical controls should be used when the majority of actuators are electrical.

The flow chart on the facing page enables the choice of control technology for a machine or machine work station where pneumatic actuators are in the majority (60% minimum); the machine must be of unit or semi-unit construction; and finally it should only comprise of separate signals and require only logic processing.

These latter conditions apply to the latest automated systems. If however the machine under consideration comprises sections with analog or digital signals, it can be structured as a series of work stations and those which do not meet all the conditions can be treated separately.

Using the Flow Chart

The three essential selection criteria are applied in turn to the machine under consideration.

1 - Distance and Reaction Time

This criterion eliminates the total pneumatic configuration for machines which are too large.

The signal transfer distance, $D = D^1 + D^2$ is easily evaluated.

- If D ≤ 4m : all configurations are possible.
- If D ≥ 16m : only electro-pneumatic is suitable.
- If 4m < D < 16m: the choice is made using Diagram A on the right; an average time is calculated for the stage T_E and, as a function of D, the diagram enables the choice of direction I all configurations possible, or direction II electro-pneumatic configuration.

2 - Matching of Sensors

We have seen the parallel which exists between pneumatic sensors and electric and electrical sensors. At this stage, verify that the majority of the sensors can be pneumatic.

3 - Volume of Processing Required

This is the optimization criterion enabling the best choice for the life of the machine and therefore its best overall cost.

The processing volume is a function of:

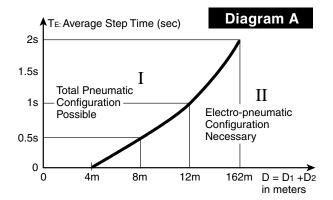

- the number of inputs / outputs, I + O
- the degree of complexity given by the formula:

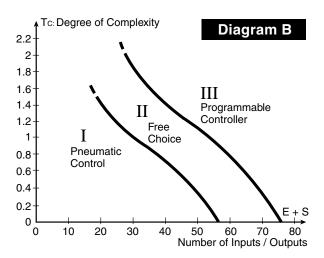

$$T_c = \frac{N^{\circ} \text{ of steps} + N^{\circ} \text{ of sequences}}{I + O}$$

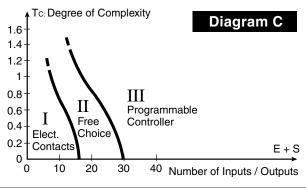

Values are established for both of these elements for the application concerned, and entered onto one of the diagrams alongside:

- **Diagram B** enables the choice between pneumatic control (I) and the programmable controller (II).
- Diagram C enables the choice between the electrical control with contacts (I) and the programmable controller (III).

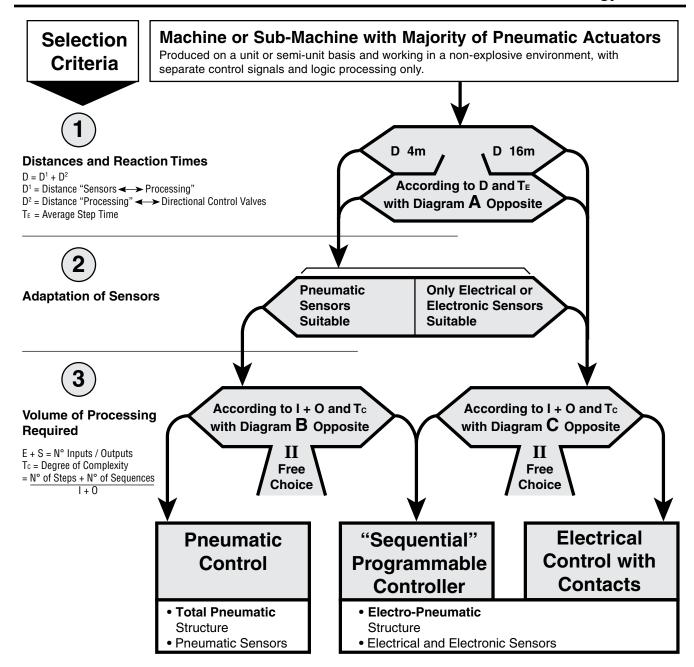

In the case where the diagram indicates "free choice", both technologies present are valid for the application concerned.

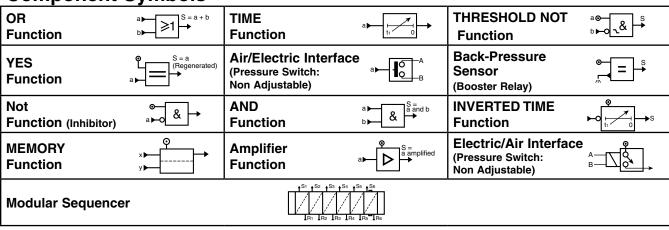

Component Symbols

Advantages

Total Pneumatic control systems have a number of advantages over electropneumatic actuation. Among these are:

System Uniformity

The use of one power and control medium simplifies design, operation, and maintenance of equipment by reducing the number of necessary skills and techniques.

Hardware Uniformity

In practice, pneumatic cylinders integrate better with pneumatic sensors than electrical sensors. For example:

In Wet Environments:

Contrary to electrical sensors, pneumatic sensors operate trouble free in wet surroundings, an application where pneumatic cylinders are generally favored.

In Explosive Environments:

Explosion-proof electrical components are cumbersome and expensive; pneumatic components, inherently explosion-proof, are ideally suited to increasingly frequent explosive industrial environments.

For Short Stroke Cylinders:

Short strokes, typical of clamping cylinders for example, are easily sensed with pneumatic limit sensors.

Where Limit Switches Cannot be Used:

This frequently encountered problem can be solved by using threshold relays.

Elimination of Solenoid Valves

Pneumatic systems are more compact, more reliable. Costs are reduced.

Elimination of Electric Power Supplies and Protection Devices

Reduced costs and added safety.

Increased Safety

No Shocks from cut or exposed wires and devices.

Longer Life and Increased Reliability

Recent generations of pneumatic controls have maximized simplicity of operation. Pneumatic controls are not inherently self-destructive as are their equivalents (through arcing).

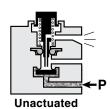

• Faster Response Times

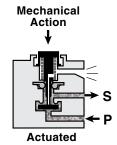

In compact control systems, total pneumatic systems have faster response times than electro-pneumatic systems.

Reduced Overall Costs

For all these reasons, total pneumatic automation is an effective technique to reduce machine design, operation and maintenance costs.

Direct Operation

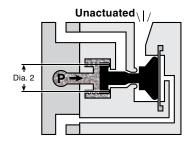

Components Using Illustrated Principles

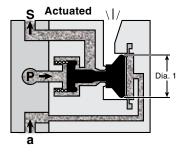

Miniature Limit Switch

Relay Operation

Non-Passing (YES Function)

- Output signal S is ON when pilot signal "a" is present.
- Relay is snap-acting because area of diameter 1 is greater than area of diameter 2.

YES Relay

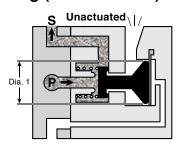

Time Delay Relay (ON Delay)

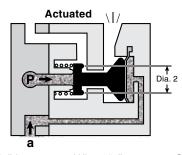

Booster Relay

Passing (NOT Function)

- Output signal S is ON when pilot signal "a" is present. When "a" appears, S is exhausted to atmosphere.
- Relay is snap-acting because area of diameter 1 is greater than area of diameter 2.

Components Using Illustrated Principles

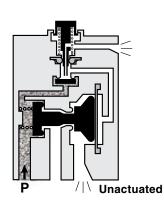

Time Delay Relay (Inverted)

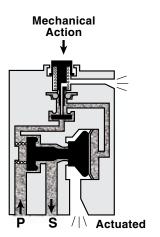

NOT Relay

Pilot Operation

Non-Passing

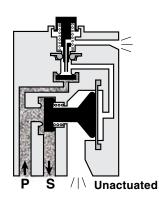

- Depressing actuator creates signal from pilot section; signal actuates NON-PASSING relay. Output S is ON.
- Associating pilot and relay in one component allows high flow (full 1/8" internal orifice) with minimal actuating effort (11 oz.). Snap-action at a precise point along actuator travel is an added characteristic.

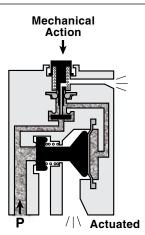

Limit Switches

Passing

- Depressing actuator creates signal from pilot section; signal actuates PASSING relay. Output S is OFF.
- Associating pilot and relay in one component allows high flow (full 1/8" internal
 orifice) with minimal actuating effort (11 oz.). Snap-action at a precise point
 along actuator travel is an added characteristic.

Push Buttons

The following chart shows how pneumatic components perform all the basic logic functions.

	Logic Function	Logic Symbol		Pneumatic Component	Function Symbol	Electrical Equivalent
P A S S I V E	OR	 ≥ 1 ir	Output S is ON if it least one of the nputs "a" OR "b" is ON	S = a + b	a b	a

Basic Features

Virtually all production machines using pneumatic actuators operate in a dedicated and repeatable sequence or cycle. The purpose of any control method is to insure that all steps of the machine's cycle occur as intended.

The sequencer constitutes the backbone of a Telepneumatic control circuit. The sequencer's poppet design provides long life using only shop air.

Logic

Modular Sequencer

Since it is modular, the sequencer can easily be configured to any application cycle requirement. Logic elements

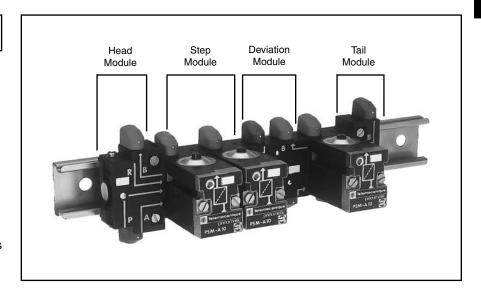

and supporting relays provide for other application needs such as safety conditions, operating modes and time

The Telepneumatic sequencer eliminates the need for solenoid operated valves.

COMPOSITION

A sequencer is comprised of a Number of step modules, each corresponding to a defined step in the machine's cycle according to the application requirements.

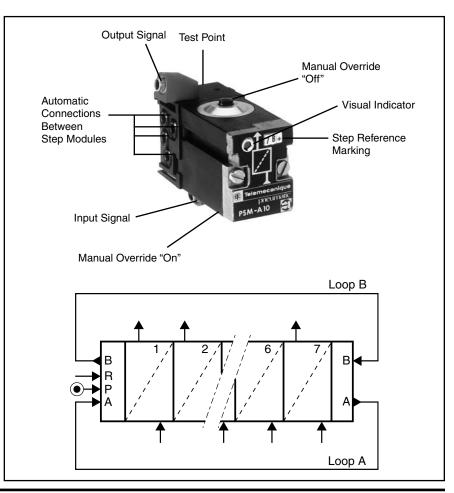

The head / tail module peforms the function of locking the easily stacked step modules to the 35 mm DIN rail while also supplying connection to the stack as follows: (1) supply pressure, (2) starting condition and (3) general and emergency resets. A deviation module is placed between step modules to provide for variation to the normal sequence of events such as skips, repeats, multi line cycles and resets.

STEP MODULE

At the heart of the sequencer, the step module is the decision making element that will read the necessary inputs and provide output commands as needed. The step module consists of the following parts:

- Input / Output via 5/32" Instant Swivels with Test Points
- · Visual Indicator, Defining Status
- · Both On and Off Manual Overrides
- · Step Reference Marking to Assist in Sequence Diagnostics
- Stackable Subbase with Special Internal Piping.

GRAFCET

The use of a function flow diagram allows the designers of machine tool automation to organize application requirements in a simple sequential flow. The GRAFCET flow diagram becomes a snapshot of the machine's positions and conditions. This simplifies understanding and modification of the specific application.

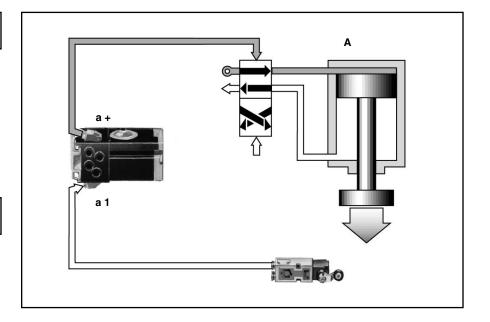

CONTROL LOOP

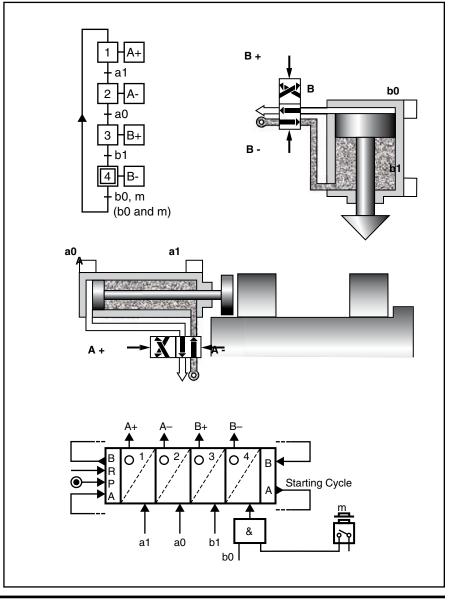

To understand the operating cycle, we first define each actuator motion in sequence. We will address each actuator with a letter starting with A. For a cylinder as shown to the right, the motion required is the extension of the cylinder. This action will now be known as A+. The "+" indicates the extension of a cylinder, or the turning of an actuator that is digital (on / off). When the cylinder reaches the end of its stroke, it will trigger a limit switch. This signal is an input (transition) that we call "a1". The "a" defines the actuator, and "1" defines its active state. This completes a step consisting of a command and a transition.

COMBINATION

We can now combine additional actuators and reciprocal motions to create a total control package. To the right are two actuators A and B. "A" is a transfer cylinder that will move parts into the workspace. "B" is a press that will form the parts.

The GRAFCET flow diagram in the upper left shows the required actions and the corresponding limit switch feedback signals to indicate the actions are complete. When the machine starts, the transfer (A) will extend (+), placing a part in the nest. Feedback (a1) states that the action is complete and initiates retraction (A-). Feedback (a0) confirms the action is complete and initiates the next motion. The press (B) will extend downward (+) until reaching the end of stroke sensor (b1) which confirms the action and initiates the final step that returns the press to its home condition (B-). The sensor (b0) confirms when (B) is home and signals end of cycle.

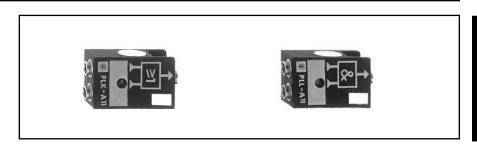

IN-LINE MOUNTED LOGIC ELEMENTS

These logic elements can be either flush mounted on any flat surface, 35mm DIN rail mounted with the addition of a spring clip or hung from the tubing.

In-line elements are available in two logic statements: AND and OR.

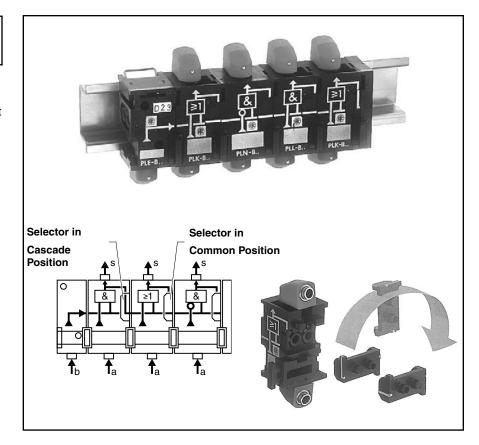

INTEGRATED LOGIC ELEMENTS

These elements can be combined with each other, allowing the creation of string statements in a compact footprint while reducing the piping required. There are three logic functions available in this configuration: AND, OR and NOT.

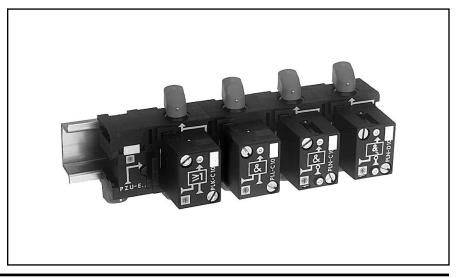

Each element is supplied with an integral locking key which allows each logic unit to lock to the next element to the right. In addition, each element includes a mode selector which enables the user to select either cascade (series) or common (parallel) cilrcuitry.

Cascade mode determines that the output of a logic element will feed the next downstream logic element, while the common mode feeds its supply to the next component. These units are designed for 35mm DIN rail mounting and are supplied with the internal piping diagram printed on the face of the device. This internal piping is field convertable.

SUBBASE MOUNTING LOGIC ELEMENTS

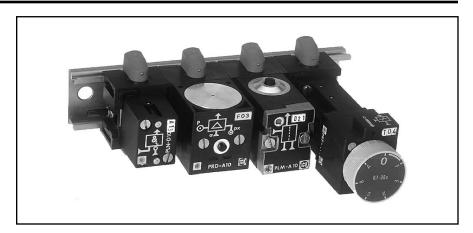

All logic devices are designed to mount on 3-port subbases. The 3-Port subbase is available in two styles (common input and cascade input) and are manifoldable with each other as well as the 4-Port subbases for relays. A stand alone 3-Port (1/8" pipe) metal subbase is also available. There are 5 logic elements for subbase mounting: AND, OR, YES, NOT and THRESHOLD NOT.

RELAYS

These components provide additional capability to the pneumatic logic system. Types available are: Time Delay, Memory, Amplifier, Sensor, Solenoid, and Pressure Switch (both pneumatic and electric). Depending on function, a 3 or 4-Port subbase is used.

3-PORT SUBBASES

These stackable subbases are designed for the mounting of:

- Logic Devices
- Timers
- Bleed Sensor Relays
- Threshold NOT Relays
- E/P and P/E Interfaces.

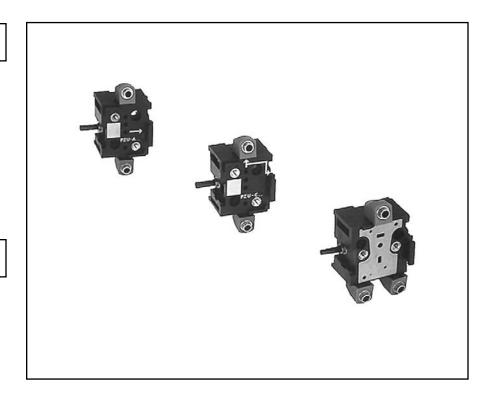

They are stackable with the 4-Port subbases below and are available in common input or cascade input styles.

4-PORT SUBBASES

These stackable subbases are designed for the mounting of:

- · Memory Relays
- Amplifier Relays for use with Proximity Sensors.

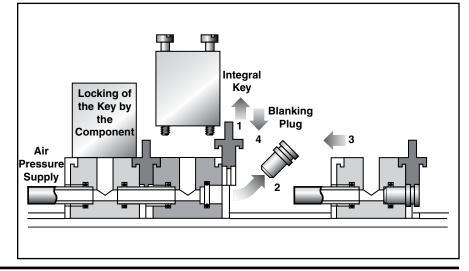

They are stackable with the 3-Port subbases above.

STACK ASSEMBLY

The drawing to the right explains the procedure for asembling subbase mounted logic components and relays.

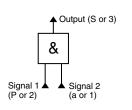

Note: The subbases are supplied with an integral key that must be pulled upward (1) to release the blanking plug (2). Now the downstream subbase can be positioned (3) then locked by returning the integral key back to its original position (4). After this process is complete, the relay or logic element are mounted on top.

Operating Principle

The time delay relay is entirely pneumatic. Air supply to the timing head is taken from the ambient atmosphere. The timing function is therefore independent of line pressure. As a result, repeatability is unaffected by variations in supply pressure, temperature or contamination of supply. In the

positive output version, output is provided by a YES relay. In the inverted version, Output is provided by a NOT relay.

Note: Piping inverted TDR for adjustable pulse function: Tee off input "a" to supply port as shown on diagram.

Time Delay Relay Operating Principle: On Delay Positive Output

SET

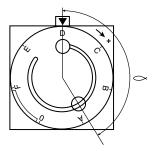

Signal "a" appears at input orifice in subbase and is divided into two separate signals after filter ①. The first signal cocks the piston ② and timing begins.

Simultaneously the second divided signal flows through fixed orifice ③ and supplies bleed at orifice ④.

TIMING

Poppet ⑤, attached to bellows ⑦ and released by piston ②, starts to extend at a rate determined by the amount of delay required. Bellows ⑦ rate of extension is controlled as follows:

Spring ⑥ pushed bellows out. To extend, bellows draws atmosphere air through filter ⑧ and circular channel ⑨ . Length of channel ⑨ varies as a function of angle, determined by knob ⑩.

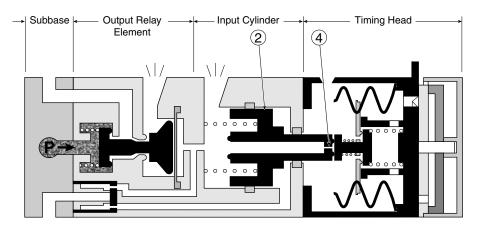

The greater the angle, the longer the time delay.

OUTPUT

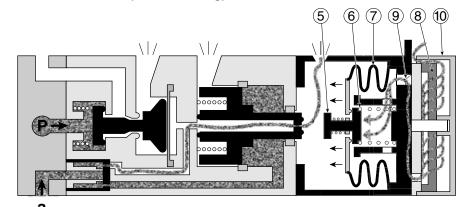

When bellows ⑦ reaches the end of its travel, poppet ⑤ seals off bleed from orifice ④, causing a rise in pressure and as a result output relay switches. Output S appears, supplied by pressure P.

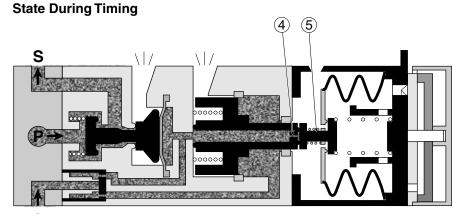

RESET

Removing the signal "a" automatically resets the time delay relay. Output S disappears.

Unactuated State (Before Timing)

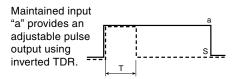

a Actuated State (After Timing)

Δ

Adjustable Pulse Output Timer

Maintained input generates adjustable pulse output. When maintained input "a" goes ON, output S goes ON then drops OFF after an adjustable time period T even though "a" is still on.

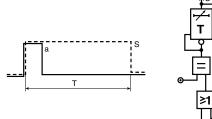

Single Adjustable Pulse Output Timer

Momentary input generates single adjustable pulse output (one shot). This circuit is useful when a brief signal needs to be prolonged, for example, rapidly actuated limit switches.

Momentary input "a" generates longer output S. After adjustable time period T, the inverted TDR cuts off output S.

Adjustable Reciprocate Output Timer

Maintained input generates repeated pulse output (clock signal). Maintained input "a" generates continuously repeated pulse output S.

- The time duration of pulse S is adjustable separately.
- The time between pulses is adjustable separately.

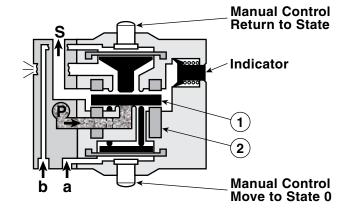

Logic

Memory Operation

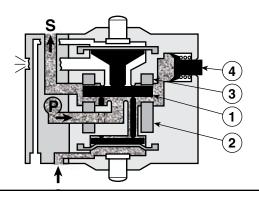

• OFF

Held in podition by magnet ②, Poppet ① closes off supply pressure P.

SET

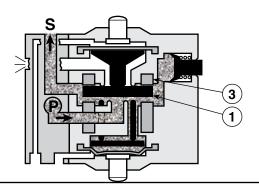

Input signal "a" acting on a diaphragm drives poppet ① from magnet ② to magnet ③ allowing pressure to flow. Output signal S appears as indicated by position indicator ④.

• ON

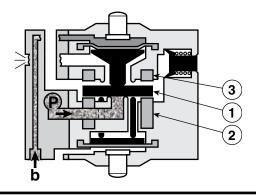

When input "a" is removed, output S is maintained since magnet ③ holds poppet ① seated.

Note: If pressure is lost, the last MEMORY will maintain its last position.

• RESET

Input "b" acting on the opposite diaphragm returns poppet 1 to magnet 2 . Outout S is removed and exhausted to atmosphere.

Logic Memory Relay

Α

Memory Relay Without SubbaseFor Mounting On 4-Port Modular Subbase

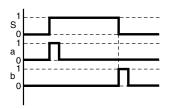

PLMA10

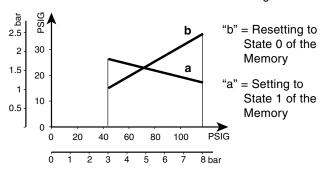

Part Number	Description
PLMA10 3-Way Double Air Pilot Operated Valve. Re Signal "b" Always Has Priority Over Set S "a". With Manual Override	
PLMA12	PLMA10 on PZUB12 Subbase

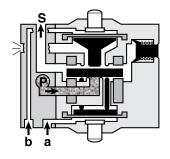

The Memory element is a relay designed to maintain output signal S after disappearance of the input signal which generated it.

Special Characteristics

The signal "a" for setting to State 1 causes the output Signal S to be maintained. This will only be erased by the Signal "b" for resetting to State 0.

Sequencer Special Applications Application of Dummy Modules

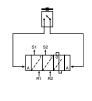

In most applications the rule of thumb for sequencer circuit design is "one step module for each step in the cycle".

Some applications, particularly those involving several sequencers controlling sub-programs, may require the use of dummy modules.

Following are the most frequent instances and the method for handeling each one.

Less than 3 Steps in the Cycle

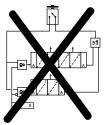

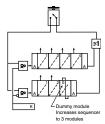

Module 1 cannot start because of module 2 resetting it while at the same time pressurizing the recycle loop.

Dummy module 0, with its output connected to its feedback port, pressurizes the recycle loop without resetting module 1. In most cases, sequencers must have at least 3 modules to operate.

Parallel Lines in the Cycle

- Input k determines which program will be activated.
- One program has less than 3 steps.

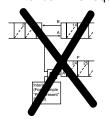

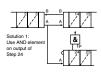

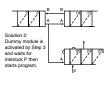

The rule of "3 modules minimum" applies in this case also.

Parallel Lines in the Cycle

- Both programs operate simultaneously.
- Interlock P is required to start the second program.

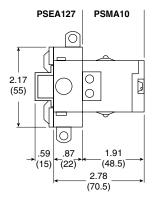

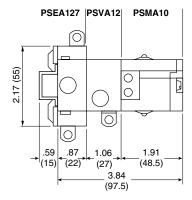

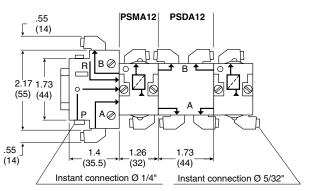

Module 3 is reset by module 4.

If interlock P is delayed, module 3, reset by 14, will be unable to satisfy AND the function. Therefore module 24 will not start.

Dimensions

Application Example

The sequencer is inherently adapted to the control of sequential automation cycles as shown in the following example.

Machine

This typical pneumatic part forming machine consists of three pneumatic cylinders with the following functions:

- Cylinder A: Part Transfer
- Cylinder B: Part Forming
- · Cylinder C: Part Ejecting

A 4-Way power valve controls each cylinder.

Limit switches are mounted at both ends of each cylinder stroke.

Push button starts the cycle..

Cycle

Step 1. Part is Transferred	A+
Step 2. Part is Formed. A retracts	B+ A-
Step 3. Cylinder B Retracts.	B-
Step 4. Part is Ejected.	C-
Step 5. Cylinder C Extends.	C+

Sequencer

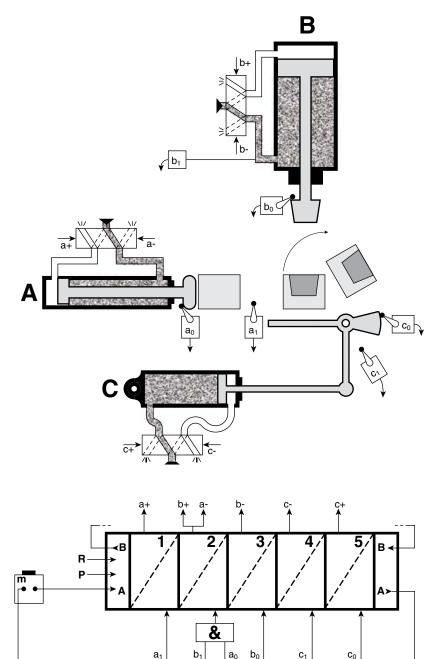

A step module is assigned to each step (or line) in the cycle.

Since there are 5 steps in the cycle, there are 5 step modules in the sequencer.

Control piping of the sequencer is immediately apparent:

- The **output** from each step module orders its assigned movement(s).
- The feedback from each completed movement(s) is directed back to the step module where the movement originated.

START push button is connected in series in the recycle loop.

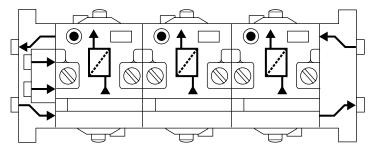

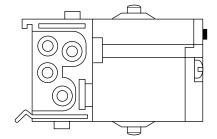

Operating Principle

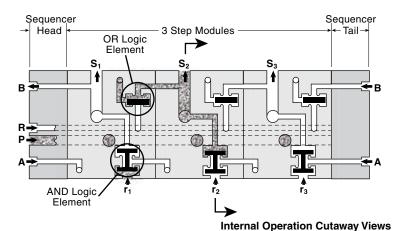

Each step module consists of a MEMORY mounted on a subbase. Integrated in each subbase are an AND function and an OR function. Module interconnections automatically plug in during sequencer assembly.

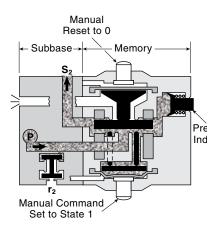

Two channels run from one end of the completed sequencer to the other:

- Common Supply Channel, inlet in entry module (P)
- General Reset Channel, input in entry module (R)

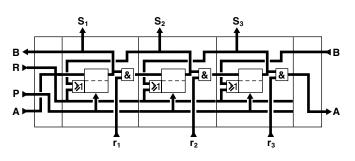

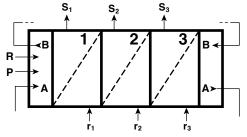

Schematic

Operating Principle

Step Module MEMORY is set (ON) by output from preceding AND element.

Output from MEMORY has three functions:

- 1. Provides working output for that step.
- 2. Resets preceding step module through OR element.
- 3. Pressurizes one input of its own AND element.

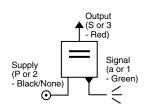

Upon completion of movement in the step, feedback signal "r" pressurizes second input of AND element. AND element goes PASSING (ON) and sets following step module MEMORY (ON).

Advantages of Modular Schematic

- Circuit design is immediately evident. Because circuit logic is integrated the designer has only to stack up modules. No need for elaborate diagrams.
- Cycle progression is clearly displayed. Position indicator identifies active step at all times.
- Cycle progression is fully interlocked. False feedback signals are rejected because the AND element in the active step module is the only one in PASSING state.
- Varing types of operating modes, emergency stops, "safeties" and interlock information can be plugged in as modular circuit elements.

Bleed Sensor RelayFor Mounting On Any 3-Port Base

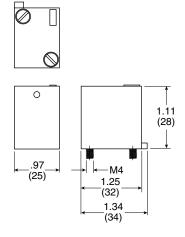

PRFA10

Bleed Sensors

Bleed sensors are used for the sensing of low forces and short travel. They are simple to install and connect. The detected object blocks the bleed air at low flow. An increase of pressure in tube (T) creates a pneumatic signal (S) on the relay equal to the supply pressure (P).

Part Number	Port Actuator	
PXFA111	5/32" Instant Touch	
PXFA121	5/32" Instant Ball Roller	
PXFA131	5/32" Instant	Cat's Whisker

Application

Bleed sensors make it possible to sense very low actuating forces or small motions in a small space. They are easy to install and connect, as they only require a single tube.

Note: The length of the interconnecting tube must remain short if quick response times are required.

С	.71	18
D	.98	25
Е	.59	15

Operating Principle, Characteristics

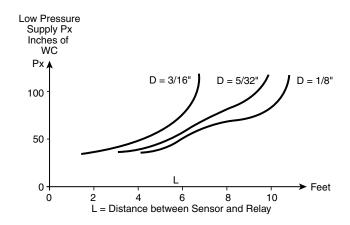

Fluidic proximity sensors are used when the application requires non-contact sensing of the moving part. A fluidic sensor emits a continuous air jet (A) at low pressure. When the object to be detected interferes with this air jet, a back pressure (a) is created. When this back pressure reaches the amplifier relay, an output signal (S) is generated equal to supply pressure (P).

Operating Characteristics

	Count and display the Number of impluses received.	
PCTA11 and PCTB11	Pulse input at Port Z.	
	Pneumatic reset at Port Y.	
	Supplies a signal at A when the preselected Number of pulses has been reached.	
PCPA11	The required Number of impulses is preselected using the keys associated with the lower display, which remains unchanged during counting.	
	The pulses to be counted are applied to Port Z. Signal A is given as soon as the two displays show the same value.	
	Port Y is used to reset the counter with a single pulse. (1)	
	The required time is preselected directly on the dial, by moving the preselection pointer to the required position.	
	Timing starts when a signal appears at 12.	
	This signal must be maintained continuously until the output signal appears at 2.	
PCMC11, PCMD11 and PCME11	Signal 2 is given at the end of the timing period.	
	The output signal is "on delay" if connected to 2 and "off delay" if connected to 4.	
	The timer is reset by breaking the command signal at 12.	
	Units have constant bleed rate of 0.14 SCFM @ 72 PSIG (4NI/min @ 5 bar)	

(1) Note: "Output" may not be used as the reset signal.

PS1E Series Electro-pneumatic Interface Valves

Section B

Features	B2-B3
Complete Units	B4
Component Parts	B5
Technical Data, Dimensions	B6
Kits & Accessories	B7

Compact, easy to install, reliable...

Easy To Meet System Design Needs

- Full flow capacity allows direct operation of small cylinders (single or double acting) or pneumatic piloting of larger control valves (pneumatic or hydraulic).
- Valve configurations in 3/2 or 4/2 (single or double acting).
- Outlet fittings (push-in) for 5/32" or 1/4" tubing.
- System modification or expansion simplified by easily adding modules to stack.
- Wide range of voltages available.
- · Multiple pressures possible in one assembly.

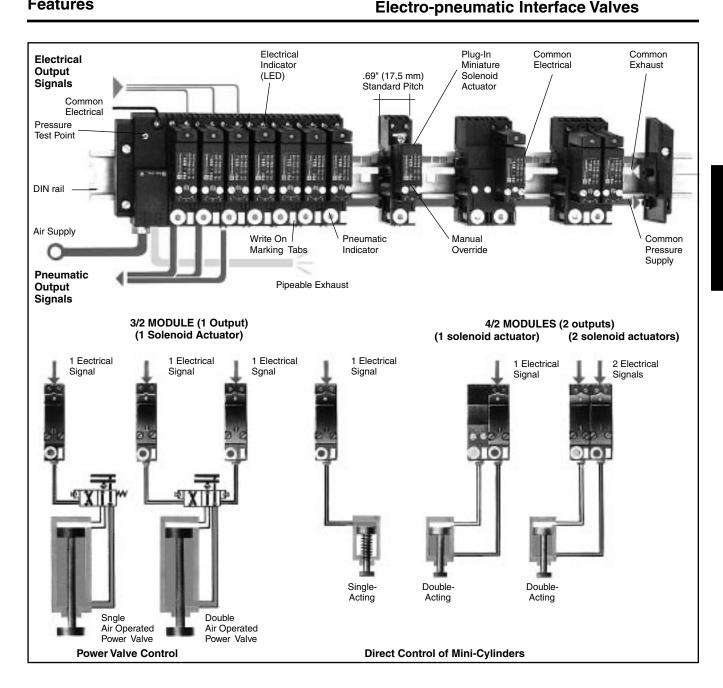

Easy To Install In Your System

- · Modules snap together and mount on 35mm (DIN) rail.
- Micro-valve stack and PLC may be mounted in the same enclosure.
- Common air supply, exhaust, and electrical supply reduce connections to 1 wire and 1 tube per module.
- Supply and exhaust air can be piped with only one tube for each.
- Fast hook-up with captive wire clamp connections and push-in fittings.
- Compatible pneumo-electric module provides integrated feedback capability for the PLC.
- Eliminates cumbersome electrical connections on machine mounted solenoid valves.

Easy To Maintain System Operation

- Manual override for setup and troubleshooting.
- Poppet design for long, trouble free life (lubricated or non-lubricated air).
- Integrated diagnostics (main air test point, output pneumatic indicator, optional suppressor / LED) provide system status at a glance.
- All electrical connections are in a protected enclosure.
- Modular design and easy connection aid in module replacement or system expansion.

supply pressure must be built up rapidly (never use a slow start valve 2/2 on the air supply for the interfaces).

When pressure is applied, the 4/2 valve takes up a predetermined position (unactuated) when no electrical signal is present.

- Output 2 (yellow indicator) passing.
- Output 4 (red indicator) non-passing.

All units include pop-up indicator for pneumatic output. Red indicates NNP / NC function. Yellow indicates NP / NO function. All model numbers shown include non-locking manual override. (For other voltages, use component parts shown on next page).

Head and Tail Sets

Used to mount valves to DIN rail and provide supply and exhaust ports. All hardware is included.

Single supply type supplys from one end of the manifold assembly with the other end blocked.

Double supply type provides pressure and exhaust ports on both ends of the assembly.

Rotary Selector Switches, 22mm (7/8")	C12	

Joystick Operators	C13
Foot Pedal Operated Switches	C14
Two-Hand Controls	C16

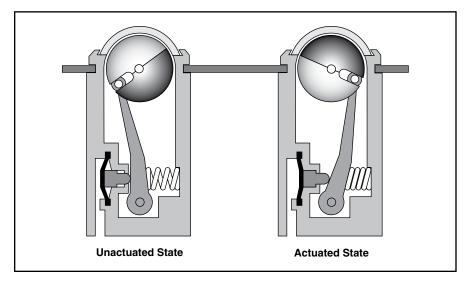

HUMAN-MACHINE DIALOG requires devices such as push buttons and selector switches to provide command inputs. A wide variety of these devices is available to meet most application needs. Both pneumatic and electrical switch bodies are available to match system technology. All of these devices use the 22 mm (7/8") mounting standard.

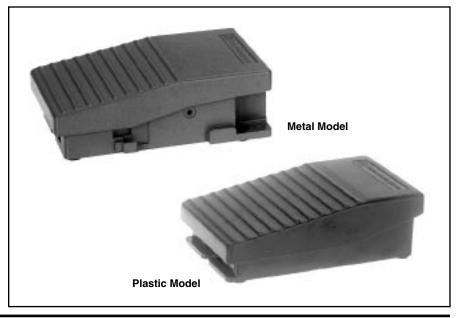

PNEUMATIC VISUAL INDICATORS

An indicator ball is rotated by a pneumatic input, changing the visible color. The ball sits behind a clear plastic window, providing a wide field of view. The visual indicators are available in five brightly colored Day-Glow paints for increased visibility. Like push buttons and selector switches, visual indicators use the 22mm (7/8") mounting standard.

FOOT PEDAL SWITCHES

When the application requires the use of foot pedals, these devices can be used to initiate a cycle or a step within a cycle. A metal foot pedal is available with protective guard.

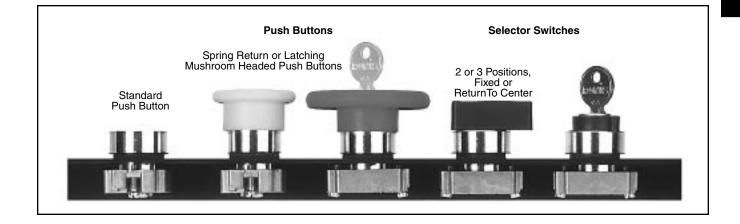

MODULAR PNEUMATIC / ELECTRIC PUSH BUTTONS

As with electrical contact switches, pneumatic valve modules can be mounted on a number of different operating heads.

- Pneumatic normally non passing (NNP) is equivalent to electrical normally open (N.O.).
- Pneumatic normally passing (NP) is equivalent to electrical normally closed (N.C.).

Note: Electrical switches can be stacked, but the rear connection on pneumatic switches prevents stacking. Therefore, when mixing electrical and pneumatic switch bodies on the same operator, the pneumatic switch must be mounted last.

With 3/2 Valve Bodies 5/32" Instant Straight Connections

Accessories

Electrical Switch Bodies

When combined with pneumatic valves ,these contact blocks allow different forms of power to be provided from a single push button. Can be mounted with both types of valves PXBB3 / PXBB4.

Electrical Specification: 240V, 10Amp

Part Number	Type of Contact		
ZBE101	\	Normally Open (NO)	
ZBE102	4	Normally Closed (NC)	

Note: Plastic Mounting Ring ZB5AZ009 to be used with ZB5 Plastic Operating Heads.

Metal Mounting Ring ZB4BZ009 to be used with ZB4 Metal Operating Heads.

Metal: ZB4BZ009

Plastic: ZB5AZ009

Mounting Ring for Valve Bodies, Switch Bodies and **Operating Heads**

To make up a complete push button with one to three switching elements with 5/32" instant connections, use this mounting block and select the operating heads and bodies in this Section.

Part Number	Description
ZB4BZ009	Metal Mounting Ring
ZB5AZ009	Plastic Mounting Ring

To make up a complete selector switch with one or two switching elements with 5/32" instant connections, use this mounting block and select the operating heads and bodies in this Section.

Part Number	Description
ZB4BZ009	Metal Mounting Ring
ZB5AZ009	Plastic Mounting Ring

Note: To release push button from mounting ring, pull lever on top of mounting ring up and remove push button operator. To assemble push button operator to mounting ring, align arrows and snap into place.

Note: Bold Items are Ready (Stock)

Functionality Explanation

Fluid Power			Universal Description	Electrical	
Function	Symbol		nbol Universal Description		Symbol
Normally Closed (N.C.)	2-Way	3-Way	Normally Non-Passing (NNP)	Normally Open (N.O.)	→
Normally Open (N.O.)	2-Way	3-Way	Normally Passing (NP)	Normally Closed (N.C.)	

Type of Switching: Universal 3-Way: Valve can be connected either as NP or NNP as required by connecting the primary air supply to port 1 or port 3.

NNP: Normally Non-Passing. _____

NP: Normally Passing. ----

NNP + NNP: Double Switch Body,

Both Normally Non-Passing.

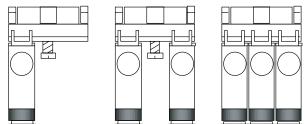

NNP + NP: Normally Non passing and Normally-Passing.

NP + NP: Both Normally Passing.

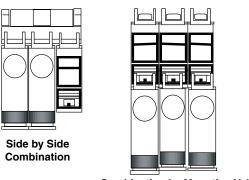

Combination of Output Devices On a Single Mounting Block

Up to 3 output devices (valves or electrical contacts) can be mounted side by side on 1 mounting block.

Note: The central position can only be activated by push button heads.

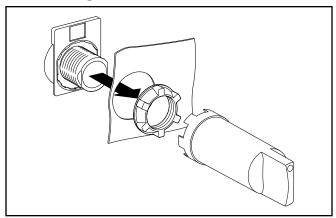

Electrical Contacts and Valves can be Combined Either Side by Side, or by Mounting the Valve on the Back of the Electrical Contact.

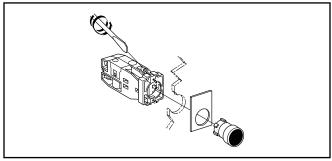

Combination by Mounting Valves
On the Back of the

Notes

These Rotary Switches operate in either direction. They come assembled with switch PXBB1921 (Normally Passing). All switches are held in the actuated non-passing position except the one associated with a given dial position, which is in the unactuated Normally Passing position.

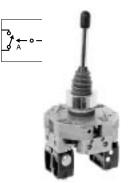

Example of Operation: Rotation from Position 1 to Position 2:

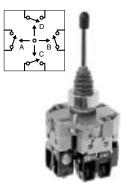

- Switch 1 changes from unactuated Normally Passing to actuated non-passing.
- Switch 2 changes from actuated non-passing to unactuated Normally Passing.

Units will accept all switch bodies shown earlier in this Section, but care must be taken in selecting switch type.

With 5/32" Instant Connections, 1/16" I.D. Internal Orifice

2-Position Unit 4-Position Unit

Note: These Joystick Operators come assembled with switch type PXBB1911, but will accept all Switch Bodies shown later in this Section.

Features

• The pre-assembled two-hand control enclosure occupies both hands of an operator by requiring nearly simultaneous operation of two pushbuttons

Module and Pre-Assembled Enclosure

- Poppet snap-acting (no spools)
- Same air as in cylinders Filtration: 40 micron
- No lubrication required

PXPC111

Part Number	Connections	
PXPC111	5/32" Instant	

Operation

- Output "S" will appear only if "A" and "B" are simultaneously operated (within .5 seconds or less of each other).
- · If the operator actuates only one pushbutton, either "A" or "B", or if both "A" and "B" are actuated but at an interval greater than .5 seconds, output "S" will not
- Output "S" is regenerated by supply "P". Output "S" will therefore disappear if supply "P" is cut off.
- Output "S" will disappear if either "A" or "B" is released.
- If output "S" disappears for any reason, "A" and "B" must be nearly simultaneously actuated to again provide output "S".
- Since output "S" is regenerated it appears sharply, at full force (snap-acting), and is quickly exhausted upon deactivation. In addition the module is not affected by the length or diameter of tubing used for output "S".

General Characteristics

Operating Pressure40 to 120 PSI (3 to 8 bar)

Permissible Fluids -

Air or neutral gas 40 micron filtration, lubricated or dry

Flow at 90 PSI (6 bar) 7 SCFM (200 I/mn ANR)

Basic Features

To achieve the sensing or feedback function, pneumatic sensors can be:

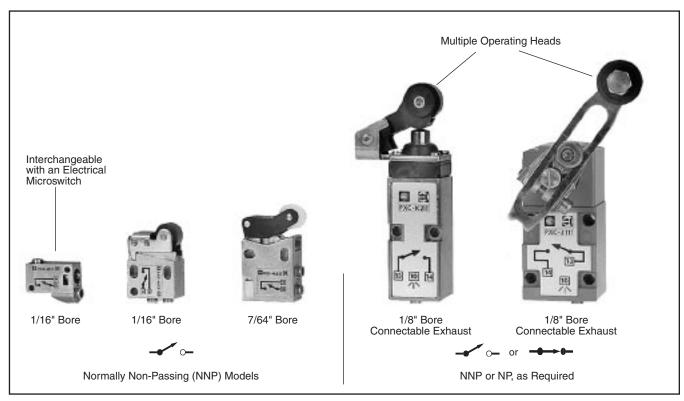

- · Limit Switches in a Variety of Sizes and Configurations
- · Pressure Switches with Many Adjustable Ranges
- Components Designed Specifically for Pneumatic Technology using Pressure Variation, Air Bleed or Blocking for Detection.

A wide variety of pneumatic sensors are available to suit any application requirement.

PNEUMATIC LIMIT **SWITCHES**

Pneumatic limit switches are nonpassing (NNP) or passing (NP) when actuated by a moving part. The various operating levers, bore dimensions and functions are given below.

Blocking Valves

The blocking valve is a single acting spring return 2/2 valve in a fitting format. The device requires a pneumatic pilot signal to open, which allows free flow of air, gas or liquid to pass. As long as a pilot signal is present, the device will remain open. When the pilot signal is removed, the internal spring will close the blocking valve, bubble tight. The blocking valve is oil serviceable and rated to 150 PSI.

These devices have two primary design uses: (1) to prevent unwanted gravity induced motion in cylinders during shut down procedures or during periods of lost supply pressure and (2) freezing the cylinder position by using a blocking valve at each end of the cylinder. Application needs such as tool or work piece protection, horizontal indexing or inspection stops are often satisfied by these devices.

General Description

Threshold Sensors – PWS

The plug-in threshold sensors provide feedback information on pneumatic cylinder status in one of three possible outputs ... pneumatic, electric, or electronic. Mounted into the cylinder port, these devices monitor the back pressure of the cylinder's exhaust. When the cylinder's piston stops, the back pressure rapidly drops and the threshold sensor provides the desired output. Ideal for variable stroke applications such as robotics where other sensor type devices such as limit switches are impractical, these devices provide a signal whenever the cylinder stops motion.

The threshold sensor consists of two complementary sub assemblies (1) the banjo fitting and (2) the plug-in sensor element. In all cases, the sensor is easily plugged into the banjo fitting and locked in place with a spring clip. The banjo fitting is designed to accept (piggy backed) other functional fittings such as flow controls or blocking valves. Simply select the sensor based on the type feedback signal that best fits the application.

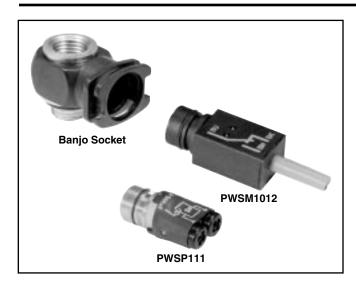

PWS General Characteristics

Operating Pressure	0 to 150 PSI
Permissible Fluids	Air or neutral gas, 50 µm filtration, lubricated or not
Operating Temperature	5° to 140°F (-15° to 60°C)
Storage Temperature	-40° to 160°F (-40° to 70°C)
Flow	N/A
Mechanical Life	10 Million
Maximum Operating Frequency	10Hz
Material: Body	Thermoplastic
Mounting Screw	Brass
Maximum Mounting Torque: 10-32 UNF and M5	88 inch pounds
1/8"	70 inch pounds
1/4"	105 inch pounds
3/8"	265 inch pounds
1/2"	310 inch pounds
Adjustment	N/A
Adjustment Locking	N/A

Piloting and De-Piloting Pressure

Threshold Sensors	Pilot with Operating Pressure of 90 PSI	Depilot with Operating Pressure of 90 PSI
PWSP111	64 PSI	6 PSI
PWSM1012	15 PSI	9 PSI
PWSE101 and PWSE111	10 PSI	7 PSI

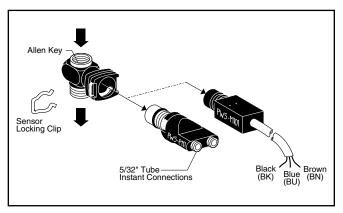

Model Selection

Plug-in Sensors			
Output Model Number Connection			
Pneumatic	PWSP111	5/32" push-in	
Electrical	PWSM1012	3-wire cable (6 ft)	

Application

The threshold sensor provides electrical or pneumatic feedback information on pneumatic (air) cylinder status. These devices monitor the back pressure of the cylinder's exhausting chamber. When the cylinder stops, the back pressure drops and the threshold sensor provides the desired output. Ideal for variable stroke applications. The banjo fitting and the feedback element are two separate subassemblies, giving the user flexibility between electrical and pneumatic outputs as feedback.

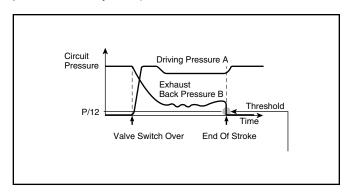

Mounting

Banjo fittings in 10-32 to 1/2" pipe sizes are designed to be installed directly into actuator ports (up to 5" bore cylinders). The banjo fitting can accommodate other functional fittings and components such as right angle flow control valves or blocking valves. Banjo fittings screw into actuators using an Allen wrench or 5/16" hex head wrench for 10-32 size. Electrical or pneumatic feedback element snaps into place using a locking clip.

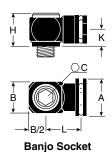

Operation

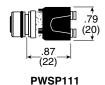

Pneumatic sensors have a continuous pressure signal applied to the sensor device. Electrical sensors have a continuous electrical signal applied to the sensor device. The threshold sensor assembly mounted directly into the cylinder Port provides an output signal S, which can be pneumatic or electrical, when the falling back pressure in the exhausting chamber of the cylinder reaches the operating threshold (approximately 6-9 PSIG). (The device is a normally passing device. The output is only on when there is nearly zero pressure at the cylinder.)

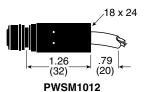

Dimensions

Specifications

Operating Pressure	0 to 150 PSIG (0 to 10 bar)
Temperature Range	5°F to 140°F (-15°C to 60°C)

CAUTION: If it is possible that the ambient temperature may fall below freezing, the medium must be moisture free to prevent internal damage or unpredictable behavior.

Maximum Operating Frequency	10 Hz
Pilot Pressure (PWSP111)	>64 PSIG (4.4 bar)
Threshold Pressure	6 to 9 PSIG (.4 to .6 bar)
Output Flow Rate (PWSP111)	3 SCFM at 90 PSIG
Current Rating (PWSM1012) -	
5 VA 250 VAC	

5W, 48 VAC

Materials -

Body.....Thermoplastic Mounting Screw & Threads.....Brass

Life Expectancy -

10 million cycles with dry air at 90 PSIG, 68°F, and 1 Hz operating frequency

Voltage Range (PWSM1012) -

12 - 240 VAC 12 - 48 VDC

Accessories

Pneumatic Control Components

Section E

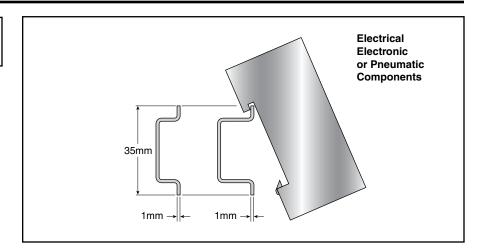

Basic Features	E2-E3
Mounting Accessories	
Rail, Spacers, Terminal Blocks, Tools	E4

MOUNTING ON DIN RAIL

Suitable for various uses, the rails shown on the right all are conform to standards NF, DIN, EN: width 35 mm, latching groove thickness 1 mm.

They are therefore suitable for the simple clip-on mounting of all standard components.

MOUNTING IN ENCLOSURE

When pneumatic components generated humid exhausts, they had to be separated from electrical components, and a special pneumatics enclosure was necessary.

Now that the exhaust is captured and/or the air is dry, it has become more economical to locate the electro- mechanical, electronic, and pneumatic components in the same enclosure: the assembly is more compact, the connections are shorter, the component positions and their referencing are more logical, thus facilitating any interventions.

The Grid System

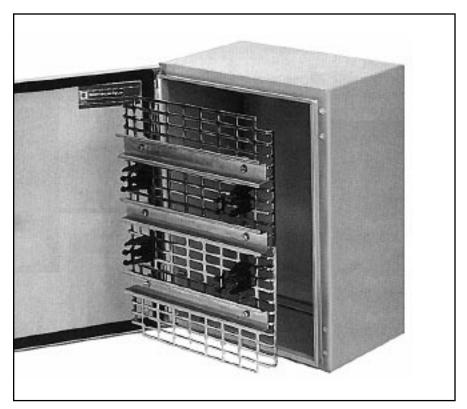

Very familiar to electricians, the system includes the enclosures, the mounting plates, the rails and all the installation and wiring accessories for the three technologies: electromechanical, electronic and pneumatic.

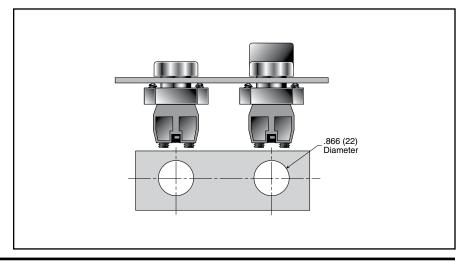

MOUNTING IN A CONTROL STATION

The pneumatic push-buttons presented have the same operating heads as electrical push-buttons.

Because of this, their installation in control panels or control stations is exactly the same :

- same mounting centers;
- same cutout Ø.

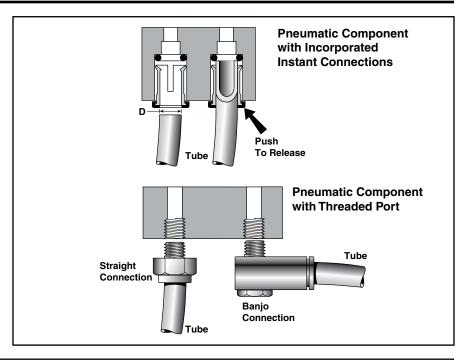

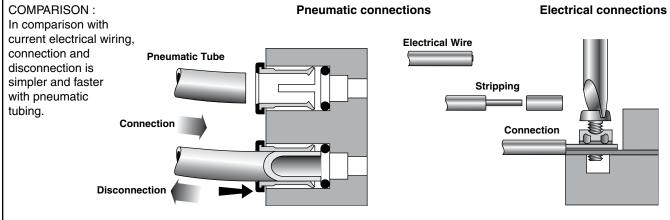

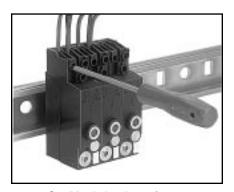

PNEUMATIC CONNECTIONS

The flexible pneumatic tubes are connected without preparation, by simply pushing into the component connection. Disconnection is also instant. One push on the external collet unlocks the tube.

ELECTRICAL CONNECTIONS

On Modular Interfaces

Designed to be mounted in an enclosure, electro-pneumatic or pneumo-electric interfaces are all connected by screw terminals, as are industrial electrical or electronic components.

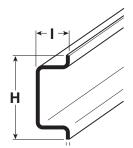

Plug-In Connectors

When it is necessary to mount the components outside the enclosure, the solenoid valves are fitted with a protected plug-in connector (IP65).

ATEX

European Directive Information

Section F

What is ATEX?

ATEX is a European Directive (94/9/EC) valid for products to be used within an explosive atmosphere.

Why is ATEX?

Harmonized European ATEX Standard

The European Union has adopted two harmonized directives in the field of health and safety. The directives are known as ATEX100a and ATEX137. Directive ATEX100a (94/9/EC) lays down minimum safety requirements for products intended for use in potentially explosive atmospheres in European Union member states. Directive ATEX137(99/92/EC) defines minimum requirements for health and safety at the workplace, for working conditions and for the handling of products and materials in potentially explosive atmospheres. This directive also divides the workplace into **zones** and defines criteria by which products are **categorized** within these zones.

The **owner** of the installation must analyze and assess the area in which the explosive gas / dust mixture may occur, and if necessary must divide it into. This process of zoning then allows the correct plant and equipment to be selected for use in the area.

Zones		Dresense of Detentially	Type of		
Gas G	Dust D	Presence of Potentially Explosive Atmosphere	Risk		
0	20	Present Continuously or for Long Periods	Permanent		
1	21	Likely to Occur in Normal Operation Occasionally	Potential		
2	22	Not Likely to Occur in Normal Operation but, if it Does Occur, will Persist for a Short Period Only	Minimal		

Levels of Protection for the Various Equipment Categories

The various equipment categories must be capable of operating in accordance with the manufacturer's operating specifications at defined levels of protection. With regard to the Machinery Directive, directive 94/9/EC (ATEX100a) takes precedence over the Machinery directive with regard to explosion protection in potentially explosive atmospheres.

Level of	Category		Time of	On a watin a	
Protection	Group I	Group II	Type of Protection	Operating Specification	
Very High	Very High M1		Two independent means of protection or safety, ensuring that the equipment	The equipment remains energized and functional even with an explosive atmosphere present	
Very High		1	remains functional even in the event of two faults occurring independently of each other	The equipment remains energized and functional in zones 0, 1, 2 (G) and / or zones 20, 21, 22 (D)	
High	M2		Protection suitable for normal operation and severe operating conditions	The equipment is de-energized in the event of an explosive atmosphere	
High	_	2	Protection suitable for normal operation and frequent faults, or equipment in which faults normally have to be taken into account	The equipment remains energized and functional in zones 1, 2 (G) and / or zones 21, 22 (D)	
Normal	_	3	Protection suitable for normal operation	The equipment remains energized and functional in zone 2 (G) and / or zone 22 (D)	

Classifying of Ex-equipment According to the ATEX-directive

Group	I Mines, Combustible Vapors		II Other Potentially Explosive Atmospheres (Gases, Dusts, Mists and Vapors)					
Category	M1	M2	1		1 2		í	3
Atmosphere			G	D	G	D	G	D
Zone			0	20	1	21	2	22

What are the Stated Temperature Classes?

Classification of flammable gases and vapors on the basis of ignition temperature.

Temperature Classes	Maximum Allowed Surface Temperature on the Material in C°
T1	450
T2	300
Т3	200
T4	135
T5	100
T6	85

ATEX Product Compliance

Products	Part Number	Labels	Zones	
Limit Switches	PXC-M	T6 (85°C)	1, 2, 21, 22	
Logic	PLL-, PLK-, PLN- T6 (85°C)		1, 2, 21, 22	
	PSV-A1			
Control Duty	PXV-F1, PXB- B4	T6 (85°C)	1, 2, 21, 22

Safety Guide For Selecting And Using Pneumatic Division Products And Related Accessories

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF PNEUMATIC DIVISION PRODUCTS, ASSEMBLIES OR RELATED ITEMS ("PRODUCTS") CAN CAUSE DEATH, PERSONAL INJURY, AND PROPERTY DAMAGE. POSSIBLE CONSEQUENCES OF FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THESE PRODUCTS INCLUDE BUT ARE NOT LIMITED TO:

- Unintended or mistimed cycling or motion of machine members or failure to cycle
- Work pieces or component parts being thrown off at high speeds.
- Failure of a device to function properly for example, failure to clamp or unclamp an associated item or device.
- Explosion
- · Suddenly moving or falling objects.
- · Release of toxic or otherwise injurious liquids or gasses.

Before selecting or using any of these Products, it is important that you read and follow the instructions below.

1. GENERAL INSTRUCTIONS

- **1.1. Scope:** This safety guide is designed to cover general guidelines on the installation, use, and maintenance of Pneumatic Division Valves, FRLs (Filters, Pressure Regulators, and Lubricators), Vacuum products and related accessory components.
- 1.2. Fail-Safe: Valves, FRLs, Vacuum products and their related components can and do fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of associated valves, FRLs or Vacuum products will not endanger persons or property.
- **1.3 Relevant International Standards:** For a good guide to the application of a broad spectrum of pneumatic fluid power devices see: ISO 4414:1998, Pneumatic Fluid Power General Rules Relating to Systems. See www.iso.org for ordering information.
- 1.4. Distribution: Provide a copy of this safety guide to each person that is responsible for selection, installation, or use of Valves, FRLs or Vacuum products. Do not select, or use Parker valves, FRLs or vacuum products without thoroughly reading and understanding this safety guide as well as the specific Parker publications for the products considered or selected.
- 1.5. User Responsibility: Due to the wide variety of operating conditions and applications for valves, FRLs, and vacuum products Parker and its distributors do not represent or warrant that any particular valve, FRL or vacuum product is suitable for any specific end use system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing, is solely responsible for:
 - Making the final selection of the appropriate valve, FRL, Vacuum component, or accessory.
 - Assuring that all user's performance, endurance, maintenance, safety, and warning requirements are met and that the application
 presents no health or safety hazards.
 - Complying with all existing warning labels and / or providing all appropriate health and safety warnings on the equipment on which the valves, FRLs or Vacuum products are used; and,
 - Assuring compliance with all applicable government and industry standards.
- 1.6. Safety Devices: Safety devices should not be removed, or defeated.
- 1.7. Warning Labels: Warning labels should not be removed, painted over or otherwise obscured.
- **1.8. Additional Questions:** Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the product being considered or used, or call 1-800-CPARKER, or go to www.parker.com, for telephone numbers of the appropriate technical service department.

2. PRODUCT SELECTION INSTRUCTIONS

- **2.1. Flow Rate:** The flow rate requirements of a system are frequently the primary consideration when designing any pneumatic system. System components need to be able to provide adequate flow and pressure for the desired application.
- **2.2. Pressure Rating:** Never exceed the rated pressure of a product. Consult product labeling, Pneumatic Division catalogs or the instruction sheets supplied for maximum pressure ratings.
- 2.3. Temperature Rating: Never exceed the temperature rating of a product. Excessive heat can shorten the life expectancy of a product and result in complete product failure.
- 2.4. Environment: Many environmental conditions can affect the integrity and suitability of a product for a given application. Pneumatic Division products are designed for use in general purpose industrial applications. If these products are to be used in unusual circumstances such as direct sunlight and/or corrosive or caustic environments, such use can shorten the useful life and lead to premature failure of a product.
- 2.5. Lubrication and Compressor Carryover: Some modern synthetic oils can and will attack nitrile seals. If there is any possibility of synthetic oils or greases migrating into the pneumatic components check for compatibility with the seal materials used. Consult the factory or product literature for materials of construction.
- 2.6. Polycarbonate Bowls and Sight Glasses: To avoid potential polycarbonate bowl failures:
 - Do not locate polycarbonate bowls or sight glasses in areas where they could be subject to direct sunlight, impact blow, or temperatures outside of the rated range.
 - Do not expose or clean polycarbonate bowls with detergents, chlorinated hydro-carbons, keytones, esters or certain alcohols.
 - Do not use polycarbonate bowls or sight glasses in air systems where compressors are lubricated with fire resistant fluids such as phosphate ester and di-ester lubricants.

Safety Guide

- 2.7. Chemical Compatibility: For more information on plastic component chemical compatibility see Pneumatic Division technical bulletins Tec-3, Tec-4, and Tec-5
- 2.8. Product Rupture: Product rupture can cause death, serious personal injury, and property damage.
 - Do not connect pressure regulators or other Pneumatic Division products to bottled gas cylinders.
 - · Do not exceed the maximum primary pressure rating of any pressure regulator or any system component.
 - · Consult product labeling or product literature for pressure rating limitations.

3. PRODUCT ASSEMBLY AND INSTALLATION INSTRUCTIONS

- 3.1. Component Inspection: Prior to assembly or installation a careful examination of the valves, FRLs or vacuum products must be performed. All components must be checked for correct style, size, and catalog number. DO NOT use any component that displays any signs of nonconformance.
- **3.2.** Installation Instructions: Parker published Installation Instructions must be followed for installation of Parker valves, FRLs and vacuum components. These instructions are provided with every Parker valve or FRL sold, or by calling 1-800-CPARKER, or at www.parker.com.
- 3.3. Air Supply: The air supply or control medium supplied to Valves, FRLs and Vacuum components must be moisture-free if ambient temperature can drop below freezing

4. VALVE AND FRL MAINTENANCE AND REPLACEMENT INSTRUCTIONS

- **4.1. Maintenance:** Even with proper selection and installation, valve, FRL and vacuum products service life may be significantly reduced without a continuing maintenance program. The severity of the application, risk potential from a component failure, and experience with any known failures in the application or in similar applications should determine the frequency of inspections and the servicing or replacement of Pneumatic Division products so that products are replaced before any failure occurs. A maintenance program must be established and followed by the user and, at minimum, must include instructions 4.2 through 4.10.
- **4.2. Installation and Service Instructions:** Before attempting to service or replace any worn or damaged parts consult the appropriate Service Bulletin for the valve or FRL in question for the appropriate practices to service the unit in question. These Service and Installation Instructions are provided with every Parker valve and FRL sold, or are available by calling 1-800-CPARKER, or by accessing the Parker web site at www.parker.com.
- **4.3. Lockout / Tagout Procedures:** Be sure to follow all required lockout and tagout procedures when servicing equipment. For more information see: OSHA Standard 29 CFR, Part 1910.147, Appendix A, The Control of Hazardous Energy (Lockout / Tagout)
- **4.4. Visual Inspection:** Any of the following conditions requires immediate system shut down and replacement of worn or damaged components:
 - Air leakage: Look and listen to see if there are any signs of visual damage to any of the components in the system. Leakage is an indication of worn or damaged components.
 - Damaged or degraded components: Look to see if there are any visible signs of wear or component degradation.
 - Kinked, crushed, or damaged hoses. Kinked hoses can result in restricted air flow and lead to unpredictable system behavior.
 - · Any observed improper system or component function: Immediately shut down the system and correct malfunction.
 - Excessive dirt build-up: Dirt and clutter can mask potentially hazardous situations.

Caution: Leak detection solutions should be rinsed off after use.

4.5. Routine Maintenance Issues:

- Remove excessive dirt, grime and clutter from work areas.
- · Make sure all required guards and shields are in place.
- **4.6. Functional Test:** Before initiating automatic operation, operate the system manually to make sure all required functions operate properly and safely.
- 4.7. Service or Replacement Intervals: It is the user's responsibility to establish appropriate service intervals. Valves, FRLs and vacuum products contain components that age, harden, wear, and otherwise deteriorate over time. Environmental conditions can significantly accelerate this process. Valves, FRLs and vacuum components need to be serviced or replaced on routine intervals. Service intervals need to be established based on:
 - · Previous performance experiences.
 - Government and / or industrial standards.
 - · When failures could result in unacceptable down time, equipment damage or personal injury risk.
- **4.8. Servicing or Replacing of any Worn or Damaged Parts:** To avoid unpredictable system behavior that can cause death, personal injury and property damage:
 - Follow all government, state and local safety and servicing practices prior to service including but not limited to all OSHA Lockout Tagout procedures (OSHA Standard – 29 CFR, Part 1910.147, Appendix A, The Control of Hazardous Energy – Lockout / Tagout).
 - · Disconnect electrical supply (when necessary) before installation, servicing, or conversion.
 - Disconnect air supply and depressurize all air lines connected to system and Pneumatic Division products before installation, service, or conversion.
 - Installation, servicing, and / or conversion of these products must be performed by knowledgeable personnel who understand how
 pneumatic products are to be applied.
 - After installation, servicing, or conversions air and electrical supplies (when necessary) should be connected and the product tested
 for proper function and leakage. If audible leakage is present, or if the product does not operate properly, do not put product or
 system into use.
 - Warnings and specifications on the product should not be covered or painted over. If masking is not possible, contact your local representative for replacement labels.
- **4.9. Putting Serviced System Back into Operation:** Follow the guidelines above and all relevant Installation and Maintenance Instructions supplied with the valve FRL or vacuum component to insure proper function of the system.

Richland, Michigan www.parker.com/pneumatics

G

The goods, services or work (referred to as the "Products") offered by **Parker-Hannifin Corporation**, its subsidiaries, groups, divisions, and authorized distributors ("Seller") are offered for sale at prices indicated in the offer, or as may be established by Seller. The offer to sell the Products and acceptance of Seller's offer by any customer ("Buyer") is contingent upon, and will be governed by all of the terms and conditions contained in this Offer of Sale. Buyer's order for any Products specified in Buyer's purchase document

or Seller's offer, proposal or quote ("Quote") attached to the purchase order, when communicated to Seller verbally, or in writing, shall constitute acceptance of this offer

- 1. <u>Terms and Conditions.</u> Seller's willingness to offer Products for sale or accept an order for Products is subject to the terms and conditions contained in this Offer of Sale or any newer version of the same, published by Seller electronically at www.parker.com/saleterms/. Seller objects to any contrary or additional terms or conditions of Buyer's order or any other document or other communication issued by Buyer.
- 2. Price; Payment. Prices stated on Seller's Quote are valid for thirty (30) days, except as explicitly otherwise stated therein, and do not include any sales, use, or other taxes or duties unless specifically stated. Seller reserves the right to modify prices to adjust for any raw material price fluctuations. Unless otherwise specified by Seller, all prices are F.C.A. Seller's facility (INCOTERMS 2010). Payment is subject to credit approval and payment for all purchases is due thirty (30) days from the date of invoice (or such date as may be specified by Seller's Credit Department). Unpaid invoices beyond the specified payment date incur interest at the rate of 1.5% per month or the maximum allowable rate under applicable law.
- 3. Shipment; Delivery; Title and Risk of Loss. All delivery dates are approximate. Seller is not responsible for damages resulting from any delay. Regardless of the manner of shipment, delivery occurs and title and risk of loss or damage pass to Buyer, upon placement of the Products with the shipment carrier at Seller's facility. Unless otherwise stated, Seller may exercise its judgment in choosing the carrier and means of delivery. No deferment of shipment at Buyers' request beyond the respective dates indicated will be made except on terms that will indemnify, defend and hold Seller harmless against all loss and additional expense. Buyer shall be responsible for any additional shipping charges incurred by Seller due to Buyer's acts or omissions.
- 4. Warranty. Seller warrants that the Products sold hereunder shall be free from defects in material or workmanship for a period of twelve (12) months from the date of delivery or 2,000 hours of normal use, whichever occurs first. All prices are based upon the exclusive limited warranty stated above, and upon the following disclaimer: <u>DISCLAIMER OF WARRANTY</u>: THIS WARRANTY IS THE SOLE AND ENTIRE WARRANTY PERTAINING TO PRODUCTS PROVIDED. SELLER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS AND IMPLIED, INCLUDING DESIGN, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
- 5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon receipt. No claims for shortages will be allowed unless reported to the Seller within ten (10) days of delivery. No other claims against Seller will be allowed unless asserted in writing within thirty (30) days after delivery. Buyer shall notify Seller of any alleged breach of warranty within thirty (30) days after the date the defect is or should have been discovered by Buyer. Any claim or action against Seller based upon breach of contract or any other theory, including tort, negligence, or otherwise must be commenced within twelve (12) months from the date of the alleged breach or other alleged event, without regard to the date of discovery.
- 6. LIMITATION OF LIABILITY. IN THE EVENT OF A BREACH OF WARRANTY, SELLER WILL, AT ITS OPTION, REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE WITHIN A REASONABLE PERIOD OF TIME. IN NO EVENT IS SELLER LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF, OR AS THE RESULT OF, THE SALE, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE INCURRED WITHOUT SELLER'S WRITTEN CONSENT, WHETHER BASED IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER'S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.
- 7. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application and follow applicable industry standards and Product information. If Seller provides Product or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.
- 8. Loss to Buyer's Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, will be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer ordering the items manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.
- 9. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially converted or adapted for such manufacture and notwithstanding any charges paid by Buyer. Unless otherwise agreed, Seller has the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.
- 10. <u>Buyer's Obligation; Rights of Seller</u>. To secure payment of all sums due or otherwise, Seller retains a security interest in all Products delivered to Buyer and this agreement is deemed to be a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer's behalf all documents Seller deems necessary to perfect its security interest.
- 11. Improper Use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any losses, claims, liabilities, damages, lawsuits, judgments and costs

- (including attorney fees and defense costs), whether for personal injury, property damage, patent, trademark or copyright infringement or any other claim, brought by or incurred by Buyer, Buyer's employees, or any other person, arising out of: (a) improper selection, application, design, specification or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller's use of patterns, plans, drawings, or specifications furnished by Buyer to manufacture Products; or (d) Buyer's failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.
- 12. Cancellations and Changes. Buyer may not cancel or modify or cancel any order for any reason, except with Seller's written consent and upon terms that will indemnify, defend and hold Seller harmless against all direct, incidental and consequential loss or damage. Seller may change Product features, specifications, designs and availability.
- 13. <u>Limitation on Assignment</u>. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.
- 14. Force Majeure. Seller does not assume the risk and is not liable for delay or failure to perform any of Seller's obligations by reason of events or circumstances beyond its reasonable control (hereinafter "Events of Force Majeure"). Events of Force Majeure shall include without limitation: accidents, strikes or labor disputes, acts of any government or government agency, acts of nature, delays or failures in delivery from carriers or suppliers, shortages of materials, or any other cause beyond Seller's reasonable control.
- 15. <u>Waiver and Severability</u>. Failure to enforce any provision of this agreement will not invalidate that provision; nor will any such failure prejudice Seller's right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other rule of law shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.
- 16. <u>Termination.</u> Seller may terminate this agreement for any reason and at any time by giving Buyer thirty (30) days prior written notice. Seller may immediately terminate this agreement, in writing, if Buyer: (a) breaches any provision of this agreement (b) appoints a trustee, receiver or custodian for all or any part of Buyer's property (c) files a petition for relief in bankruptcy on its own behalf, or one if filed by a third party (d) makes an assignment for the benefit of creditors; or (e) dissolves its business or liquidates all or a majority of its assets.
- 17. <u>Governing Law.</u> This agreement and the sale and delivery of all Products are deemed to have taken place in, and shall be governed and construed in accordance with the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles. Buyer irrevocably agrees and consents to the exclusive jurisdiction and venue of the courts of Cuyahoga County, Ohio with respect to any dispute, controversy or claim arising out of or relating to this agreement.
- 18. Indemnity for Infringement of Intellectual Property Rights. Seller is not liable for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets ("Intellectual Property Rights"). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that a Product sold pursuant to this agreement infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using the Product, replace or modify the Product so as to make it noninfringing, or offer to accept return of the Product and refund the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller is not liable for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any Product sold hereunder The foregoing provisions of this Section constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights.
- 19. Entire Agreement. This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale. All prior or contemporaneous written or oral agreements or negotiations with respect to the subject matter are herein merged. The terms contained herein may not be modified unless in writing and signed by an authorized representative of Seller.
- 20. Compliance with Laws. Buyer agrees to comply with all applicable laws, regulations, and industry and professional standards of care, including those of the United Kingdom, the United States of America, and the country or countries in which Buyer may operate, including without limitation the U. K. Bribery Act, the U.S. Foreign Corrupt Practices Act ("FCPA"), the U.S. Anti-Kickback Act ("Anti-Kickback Act") and the U.S. Food Drug and Cosmetic Act ("FDCA"), each as currently amended, and the rules and regulations promulgated by the U.S. Food and Drug Administration ("FDA"), and agrees to indemnify and hold harmless Seller from the consequences of any violation of such provisions by Buyer, its employees or agents. Buyer acknowledges that it is familiar with the provisions of the U. K. Bribery Act, the FCPA, the FDA, and the Anti-Kickback Act, and certifies that Buyer will adhere to the requirements thereof. In particular, Buyer represents and agrees that Buyer will not make any payment or give anything of value, directly or indirectly to any governmental official, any foreign political party or official thereof, any candidate for foreign political office, or any commercial entity or person, for the purpose of influencing such person to purchase Products or otherwise benefit the business of Seller.

05/14

Extensive Automation Solutions

Linear Actuators

Aluminum and steel pn s, rodless cylinders, and short stroke thrusters from the industry leader.

www.parker.com/pneu/linear

Air Control Valves

Valve technology that meets the most demanding requirements in any industrial application.

www.parker.com/pneu/valve

Air Preparation

Parker, the industry leader in air preparation, offers a complete line of products to ensure clean, dry, oil-free air.

www.parker.com/pneu/airprep

Connectors and Tubing

The most complete line of fluid connectors worldwide will meet virtually any automation application.

www.parker.com/pneu/fc

Rotary Actuators

Industry leader in the design and manufacture of pneumatic rack and pinion, and vane style rotary actuators.

www.parker.com/pneu/rotary

Vacuum Products and Sensors

Vacuum solutions include a broad range of generators (integrated / inline), cups, and pressure sensors.

www.parker.com/pneu/vacsen

Grippers

Parallel, angular, and three jaw grippers are available in over 1,000 configurations.

www.parker.com/pneu/gripper

Airline Accessories

Airline accessories include silencers, flow controls, and mufflers to round out Parker's pneumatic solution.

www.parker.com/pneu/access

Electric Actuators

Screw, belt-driven, and linear motor actuators for the complete range of industrial applications, offering precise motion and flexibility.

www.parker.com/em/linear

Motors and Drives

Built using industry standard interfaces and market-leading features that combine great value and performance. www.parker.com/em/motordrive

HMI and Controllers

Superior integration and support for machine control as well as HMI hardware and software.

www.parker.com/em/hmicont

Parker IPS Structural Automation

More than 150 metric and inch profiles, integral motion components, and accessories for unlimited and flexible configurations. Pre-machined kits or complete assemblies. www.parker.com/ips

Covering Electromechanical and Pneumatic markets, each of our catalogs is paired with an interactive CD. Call for your comprehensive guides today. 1-800-CParker
