

BIO-X II air sterilization filter cartridges utilize a borosilicate microfibre media. This media has proven to be particularly effective in the removal of sub-micron particles as small as 0.01 micron, therefore ensuring the removal of all microorganisms, including bacteria and viruses.

The media is sandwiched between polyaramid support materials to provide additional strength and prevent media migration. This is rigidly held between stainless steel support cylinders and finally encapsulated into stainless steel end caps. The result is a filter cartridge with the exceptional strength and efficiency necessary for absolute security in the most testing of applications.

BIO-X II filter cartridges are particularly suitable for the increasing number of high temperature applications. They also fulfil the sterile compressed air and gas requirements of the dairy, brewery and food processing industries.

#### **Features**

- Robust stainless steel componentry
- Fully validated by aerosol challenge
- 100% integrity testable by Valairdata 3 Aerosol Challenge

#### **Benefits**

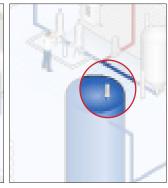

- High temperature operation up to 200°C (392°F)
- Process security under demanding conditions
- Guaranteed performance in-situ

### **Performance Characteristics**

# 

# Filtration Stage

Sterile Gas and Vent Filtration

# BIO-X II

### **Specifications**

#### Materials of Construction

Filtration Media: Borosilicate Microfibre Upstream Support: Polyaramid Downstream Support: Polyaramid Inner Support Core: Stainless Steel Outer Protection Cage: Stainless Steel End Caps: Stainless Steel Encapsulant: Epoxy Resin Standard o-rings / gaskets: Silicone

#### Food and Biological Safety

Parker domnick hunter's range of BIO-X II filters are intended for indirect food contact and as such are manufactured from materials suitable for the sterilization of compressed gasses within Food and Beverage applications. Materials conform to the relevant requirements for non-fibre release as laid down in FDA 21 CFR parts 211.72 and 210,3(b).(6).

# Maximum Continuous Inlet Air Temperature

200 °C (392 °F) Intermittent 170 °C (338 °F) Continuous

#### Sterilization

BIO-X II filter elements can withstand a maximum of 100 in-line sterilization cycles with purified saturated steam. In-line sterilization 142 °C (287.6 °F), for 30 minutes per cycle.

For detailed operational procedures and advice on cleaning and sterilization, please contact the Technical Support Group through your usual Parker domnick hunter contact.

#### **Integrity Test Data**

All cartridges are integrity tested prior to despatch by the aerosol challenge test method using a Parker domnick hunter Valairdata Integrity Test Unit.

#### **Retention Characteristics**

The BIO-X II range of cartridges have been fully validated by bacterial challenge of aerosolized *Brevundimonas diminuta*.
